Monte Carlo Frameworks
Daniel J. Duffy,Joerg Kienitz,2011-08-02 This is one of the first books that describe all the steps that are needed in order to analyze design and implement Monte Carlo applications It discusses the financial theory as well as the mathematical and numerical background that is needed to write flexible and efficient C code using state of the art design and system patterns object oriented and generic programming models in combination with standard libraries and tools Includes a CD containing the source code for all examples It is strongly advised that you experiment with the code by compiling it and extending it to suit your needs Support is offered via a user forum on www.datasimfinancial.com where you can post queries and communicate with other purchasers of the book This book is for those professionals who design and develop models in computational finance This book assumes that you have a working knowledge of C

Numerical Methods in Computational Finance
Daniel J. Duffy,2022-03-21 This book is a detailed and step by step introduction to the mathematical foundations of ordinary and partial differential equations their approximation by the finite difference method and applications to computational finance The book is structured so that it can be read by beginners novices and expert users

Part A Mathematical Foundation for One Factor Problems Chapters 1 to 7 introduce the mathematical and numerical analysis concepts that are needed to understand the finite difference method and its application to computational finance

Part B Mathematical Foundation for Two Factor Problems Chapters 8 to 13 discuss a number of rigorous mathematical techniques relating to elliptic and parabolic partial differential equations in two space variables In particular we develop strategies to preprocess and modify a PDE before we approximate it by the finite difference method thus avoiding ad hoc and heuristic tricks

Part C The Foundations of the Finite Difference Method FDM Chapters 14 to 17 introduce the mathematical background to the finite difference method for initial boundary value problems for parabolic PDEs It encapsulates all the background information to construct stable and accurate finite difference schemes

Part D Advanced Finite Difference Schemes for Two Factor Problems Chapters 18 to 22 introduce a number of modern finite difference methods to approximate the solution of two factor partial differential equations This is the only book we know of that discusses these methods in any detail

Part E Test Cases in Computational Finance Chapters 23 to 26 are concerned with applications based on previous

chapters We discuss finite difference schemes for a wide range of one factor and two factor problems This book is suitable as an entry level introduction as well as a detailed treatment of modern methods as used by industry quants and MSc MFE students in finance The topics have applications to numerical analysis science and engineering More on computational finance and the author's online courses see www.datasim.nl
