programming means what programming competency encompasses and what teachers expect of novice learners In addition it illustrates the cognitive complexity of programming as an advanced competency including knowledge skills and dispositions in context So the purpose is to communicate the breadth and depth of programming competency to educators and learners of programming including institutions curriculum designers and accreditation bodies Moreover the book s goal is to represent how a qualitative research methodology can be applied in the context of computing education research as the qualitative research paradigm is still an exception in computing education research The book provides new insights into programming competency It outlines the components of programming competencies in terms of knowledge skills and dispositions and their cognitive complexity according to the CC2020 computing curricula and the Anderson Krathwohl taxonomy of the cognitive domain These insights are essential as programming constitutes one of the most relevant competencies in all computing study programs In addition being able to program describes the capability of solving problems which is also a core competency in today s increasingly digitalized society In particular the book reveals the great relevance of dispositions and other competency components in programming education which curricula currently fail to recognize and specify In addition the book outlines the resulting implications for higher education institutions educators and student expectations Yet another result of interest to graduate students is the multi method study design that allows for the triangulation of data and results
