Transnational Synergies in School Mathematics and Science Debates Roger Openshaw,Margaret
Walshaw,2019-10-02 This book highlights and interrogates the continued interest and scrutiny of mathematics and science
education National debates on excellence and equity tend to focus largely on underachievement in mathematics and science
rather than subjects in the arts or music this is due to a belief that these curriculum areas are central to individual workplace
success and national development in a competitive economic environment The authors explore the history of these
assumptions as well as the debates based around claims that student achievement levels in these subjects has fallen

Spanning the United States New Zealand Australia and the United Kingdom the chapters question how such debates are sustained and amplified how has this perceived crisis been articulated and spread across national borders This comprehensive book will be of interest and value to scholars of mathematics and science education as well as international education debates
