Cowles Foundation for Research in Economics,1955 Journal of Financial Economics ,1987 The Financial Foundations
of Production and Uncertainty Andres F. Cantillo,2023-10-06 Rejecting much of mainstream economic theory for being too
passive this book argues that the innovative and unpredictable nature of economic phenomena is better understood with
analytical devices which allow for more creative and participatory analysis As is demonstrated this has significant
implications for our understanding of production money and finance The book introduces the concept of production
commitments the expectation of a producer that others in the chain will produce their corresponding output This expectation
forms the basis of all specialized production in the economy And being at the center of the process of specialization
production commitments are the most basic form of finance Unless they are purely redistributive money and monetary
financial assets are valuable to the production process as long as they represent outstanding production commitments It is
also demonstrated that this new way of looking at finance is better grasped with an input output framework than with the
traditional probabilistic two factor general equilibrium approach By combining the Sraffa Pasinetti approach to expectation
with G L S Shackle s potential surprise function the book posits an alternative to the standard modern portfolio theory view
of finance Understanding production commitments through the Sraffa Pasinetti framework also allows for an assessment of
the compatibility between outstanding financial assets and a given or expected structure of production This book will be of
great interest to readers of post Keynesian economics and other alternative approaches to economic theory production and
financial economics
