presents the basics of aircraft design and analysis and is intended for students in aerospace and mechanical engineering. In three sections and focusing particularly on the function of aircraft parts, this volume treats the fundamentals of aircraft design, excluding the engine and the avionics. The first part deals with the basics of structural analysis, including mechanics of rigid bodies, energy principles, analysis of trusses, and analysis of continuum structures. In the second part, basic aerodynamics, loads, beams, shafts, buckling of columns, bending and buckling of thin plates, and shear flow, shear center, and shear lag in an aeroplane fuselage and wing, and fatigue are explained. The third section covers additional topics such as finite element analysis, aircraft construction materials, and aeroelasticity. With an emphasis on lightweight design, this volume further presents some special topics such as box beams in wings, ring frames in fuselage, and longitudinal stiffeners. With many examples and solved problems, this textbook on aircraft structures is an essential source of information for both students and engineering professionals who want to introduce themselves to the topic.

Aircraft Loading and Structural Layout
Denis Howe, 2004. In this latest contribution to the conceptual design of an aircraft, Denis Howe presents comprehensive coverage of all aspects of loading action analysis, together with the logical extension to the conceptual design of the airframe. He thereby meets two perceived needs which are not currently addressed by existing aircraft design texts: where loading analysis tends to be dealt with somewhat superficially, treating only the basic symmetric flight envelope, and where structural analysis often assumes that a certain level of design detail has already been established. Graduate and post graduate level aeronautical students will welcome the approach offered by *Aircraft Loading and Structural Layout*. Practising engineers in the aircraft industry will find a useful loading action reference, providing a simple method for the derivation of initial structural data for input to advanced analysis programs, and the interpretation of the output from them.
