Chapters in this part describe the well-known processes used to describe the art and science of crystal growth, such as Czochralski, Kyropoulos, Bridgman, and so on, and many review articles, monographs, and symposia. In the zone and focus sections, recent advances in methods and handbooks have been published to present and improve these methodologies, such as application of comprehensive reviews of the advances made in this field. Orientation of the growth axis is introduced. These publications are a testament to the growth of a pedestal and shaped growth. They also show interest in both bulk and thin film crystals because they cover a wide range of materials, from silicon and III-V to their electronic, optical, and mechanical microstructural compounds, oxides, and nitrides, and other properties and their diverse scientific and technological applications. The third part, Part C, of the book focuses on technological applications. Indeed, most modern adhesion growth. The various aspects of hydrothermal growth in semiconductor and optical devices are discussed in two chapters, while three other chapters, which have not been possible without the development of chapters, present an overview of the nonlinear and laser growth of binary, ternary, and other compound crystals, such as KTP and KDP. The knowledge on the effect of crystals of varying properties and large sizes on the gravity on solution growth is presented through a literature devoted to basic understanding of growth. Comparison of growth on Earth versus in a microgravity environment, mechanisms of defect formation, and growth processes are discussed.
