

Remote Sensing ...**Sensors**

Passive Sensors: Remote sensing systems which measure energy that is naturally available are called passive sensors.

Examples: ASTER, LANDSAT, AVHRR, TOMS, MODIS, MISR, OMI, CERES

Active Sensors: The sensor emits radiation which is directed toward the target to be investigated. The radiation reflected from that target is detected and measured by the sensor.

Examples: LIDAR (CALIPSO, LITE), RADAR (SAR, PR, CPR), SONAR

Basics of Geomatics Mario A. Gomarasca, 2009-09-18 Geomatics is a neologism the use of which is becoming increasingly widespread even if it is not still universally accepted It includes several disciplines and techniques for the study of the Earth's surface and its environments and computer science plays a decisive role A more meaningful and appropriate expression is G spatial Information or GeoInformation Geo spatial Information embeds topography in its more modern forms measurements with electronic instrumentation sophisticated techniques of data analysis and network compensation global satellite positioning techniques laser scanning etc analytical and digital photogrammetry satellite and airborne remote sensing numerical cartography geographical information systems decision support systems WebGIS etc These specialized fields are intimately interrelated in terms of both the basic science and the results pursued rigid separation does not allow us to discover several common aspects and the fundamental importance assumed in a search for solutions in the complex survey context The objective pursued by Mario A Gomarasca one that is only apparently modest is to publish an integrated text on the surveying theme containing simple and
