

# Chapter 13 Lab From DNA to Protein Synthesis

## Problem

What are the steps involved in making a protein?

## Introduction

Before a protein can be built, the biochemical blueprint for its construction must be packaged and transferred out of the DNA “library.” First, the specific sequence of DNA that codes for the protein is transcribed to a complementary strand of mRNA. In eukaryotic cells, the mRNA then leaves the nucleus and passes the cytoplasm. In all cells, the mRNA molecule attaches to a ribosome, where tRNA molecules transfer the amino acid message. The completed protein will either be polypeptide, then folds into its final shape, or a protein.

In this lab, you will model transcription of DNA and translation of mRNA while you decode secret messages.

## Skills Focus

Use Models, Sequence

## Pre-Lab Questions

1. **Sequence** Consider briefly the process you will use to decode the message.

---

---

---

2. **Compare and Contrast** What are the steps involved in protein synthesis? What are they used for? What secret messages?

---

---

---

---

3. **Predict** Which cell letters will you appear in the coded message? Give a reason for your answer.
