**SUPERINTELLIGENCE** Nick Bostrom,2014 **Digital new deal: the quest for a natural law in a digital society** Riccardo Genghini,2021-06-08 The quest for a natural law that can be applied to a digital society may sound like an oxymoron but it is a necessary quest if we hope to institute a Digital New Deal Hence the title of this book Today once again mass media is disrupting society much as radio and cinema were used to buttress totalitarianism in the 1920s or even worse in the 15th century when the printing of the Bible unleashed 100 years of war plague and instability Things get messy when people disagree on facts rather than ideas Natural law springs from the features of the physical world which contains boundaries an inside and an outside limited resources living individuals objects living animals living plants climate the four elements etc None of this is a given in the digital world which looks today like feudalism in a box with fire walled communities run by unelected autocrats system administrators ruling over countless subjects whose identities are tied to the domain of the fire walled community and whose rights can only be enforced by the autocratic system administrator This

dystopic reality is neither necessary nor inevitable It is the consequence of bad technical design and inappropriate business models which are destroying the spirit of free pluralism that enabled them to thrive in the first place Information technology has its own ontology and natural rules and we must understand them and learn to regard them as being among the founding legal principles of our free open pluralistic societies Of the 12 founding digital principles addressed here the most important may well be that we must each own and control our digital identities In the world created by information technology everyone and everything should possess a UID a unique identifier Without one we are just helpless particles lost in a dark and hostile universe

*AI and IA* Ted Peters, 2019-09-01 Will advances in AI Artificial Intelligence or IA Intelligence Amplification lead to the extinction of the human race as we know it Or will superintelligence lead to utopia In this collection of thoughtful essays we must first get clear on the question is artificial intelligence actually intelligent or not Only with an affirmative answer could our techies proceed toward their goal the creation of a superintelligence that leads through transhumanism to a posthuman entity that would replace today's human Should today's moderately intelligent human species voluntarily go extinct to make way for a more intelligent species to succeed us in evolutionary history These scientific questions are addressed in this volume in light of their theological ethical and social
