Abstract

We present a concise survey of old and new results concerning cardinal functions on topological groups and then establish various relations between the classes of σ -compact, \aleph_0 -bounded and \mathbb{R} -factorizable topological groups. The article is addressed to the general topology minded reader with no (or little) experience in topological algebra. © 1998 Published by Elsevier Science B.V.

0. Introduction

The notion of a topological group goes back to the second half of the nineteenth century and has its origin in the works on smooth manifolds. The groups which appeared there were the groups of (analytic) homeomorphisms of manifolds. After a certain period of experimentation with the concept of a topological group and a quest for a general and flexible but rigorous definition of the concept it became clear that the basic thing was the continuity of the group operations. By the early thirties of the present century the concept of a topological group had been widely accepted and the first expositions of the subject appeared in [27,43,21,68].

Now we find the notion of a topological group in almost all parts of mathematics, from functional analysis to computer science. An excellent introduction to the theory of
