### Anti-Fingerprint (AFP)

The Fraunhofer Institute for Manufacturing Technology and Advanced Materials IFAM has developed a novel anti-fingerprint nano-coating. The anti-fingerprint effect means that fingerprints on the surface cannot be seen at all by the naked eye, or only very slightly. Although the fingerprint is actually on the surface, it is essentially “invisible”.

### Principle

The AFP effect is realized by applying a nano-coating to reduce the optical contrast of fingerprints. The optical properties of fingerprints are statistically imitated by a non closed, inhomogenous coating (Fig. 1 – 3). The coating has a thickness between 170 and 210 nm. Under the microscope the coating appears as an island like coating

with a blue color impression. It is, however, a highly transparent layer, meaning that the appearance of the surface is essentially unchanged. The coating and the fingerprint are hence no longer visible to the eye.

### Coating process

This is a two step process. Firstly a liquid precursor is applied as a thin film. This is then crosslinked by **vacuum ultraviolet radiation (VUV radiation)**. Technology developed at Fraunhofer IFAM such as **Light<sup>TM</sup> Technology** or the **plasma hybrid coating** can be used here.

**Fundamentals of Fingerprint Analysis** Hillary Moses Daluz, 2014-12-01 The CSI effect has brought an explosion of interest in the forensic sciences leading to the development of new programs in universities across the world While dozens of professional texts on the science of fingerprint analysis are available few are designed specifically for students An essential learning tool for classes in fingerprinting and impression evidence *Fundamentals of Fingerprint Analysis* takes students from an understanding of the historical background of fingerprint evidence to seeing how it plays out in a present day courtroom Using a pedagogical format with each chapter building on the previous one the book is divided into three sections The first explains the history and theory of fingerprint analysis fingerprint patterns and classification and the concept of biometrics the practice of using unique biological measurements or features to identify individuals The second section discusses forensic light sources and physical and chemical processing methods Section Three covers fingerprint analysis with chapters on documentation crime scene processing fingerprint and palm print comparisons and courtroom testimony Designed for classroom use each chapter contains key terms learning objectives a chapter summary and review questions to test students assimilation of the material Ample diagrams case studies and photos demonstrate concepts in a way that prepares students for working actual cases

*Sol-Gel Nanocomposites* Massimo Guglielmi, Guido Kickelbick, Alessandro Martucci, 2014-07-05 This book provides comprehensive coverage of nanocomposite materials obtained by the sol gel method from synthesis to applications and including design tools for combining different properties Sol gel nanocomposites are of great interest in meeting processing and application requirements for the development of multifunctional materials These materials are already commercialized for a number of applications from scratch resistant and anti adhesive coatings to optical materials with active and passive properties Biomedical applications holographic recordings fuel cells and hydrogen storage resists and catalysts are among the potential uses The novel mechanical optical and electronic properties of nanocomposite materials depend not only on the individual component materials but also on their morphology and nanoscale interfacial characteristics Sol gel is a highly versatile method for obtaining both the matrix and the filler of the nanocomposite and for chemically adjusting the interface to optimize structure and properties Although nanocomposites are widely discussed in the literature the focus has been mainly on polymer nanocomposites This book addresses nanocomposites based on inorganic or hybrid organic inorganic matrices with an emphasis on the scientific principles which are the basis for nanocomposite sol gel synthesis and applications A didactic approach is followed with different topics developed from a fundamental point of view together with key examples and case studies First comprehensive treatment of nanocomposites obtained by sol gel methods Focuses on nanocomposites with inorganic and

hybrid organic inorganic matrices Describes design tools to optimize structure and properties for various applications Covers synthesis processing characterization and modeling Uses first principles to describe the influence of interfacial characteristics on materials properties Presents case studies for both films and bulk applications Provides examples of products on the market with descriptions of the scientific principles at the base of their success Includes contributions from recognized leaders in this multidisciplinary area
