Mastication is the initial process in the oral cavity, in which the teeth break down food into smaller bits. The mouth's chemical digestion is limited to salivary amylase and lingual lipase.
2. What is the function of the liver in digestion?
The job is to create and exude bile, digest and purify the blood including freshly acquired nutrients from the small intestine.
3. What role does the gall bladder play in digestion?
Bile, a viscous fluid produced by the liver, aids in fat breakdown and is stored in the gallbladder.
4. Why is the orientation of muscle of the stomach wall important? How does this contribute to its function?
Because the longitudinal layer in the stomach aids in moving food from the cardiac region through the stomach's body and into the pylorus, and then the circular layer presses across the whole stomach and especially aids in maintaining the pyloric and cardiac sphincters closed.
