Weekly Question

## Do we really drink the same water that dinosaurs did?

The movement of water between the ocean, air, and land is powered by the sun. Energy from the sun heats liquid water and causes it to evaporate, or change into an invisible gas called water vapor. Water vapor enters the atmosphere, where it mixes with other gases. We describe the amount of water vapor in the air in terms of humidity. When there is more moisture in the air, the humidity is higher.

Most of the evaporation on Earth is from oceans close to the equator, where heating by the sun is greatest. Water brought to land by the atmosphere
