

The D31, D41, D51, D61 and D111 are electrical controlled 4/3 or 4/2 way directional control valves. The valves are pilot-operated by an NCG valve.

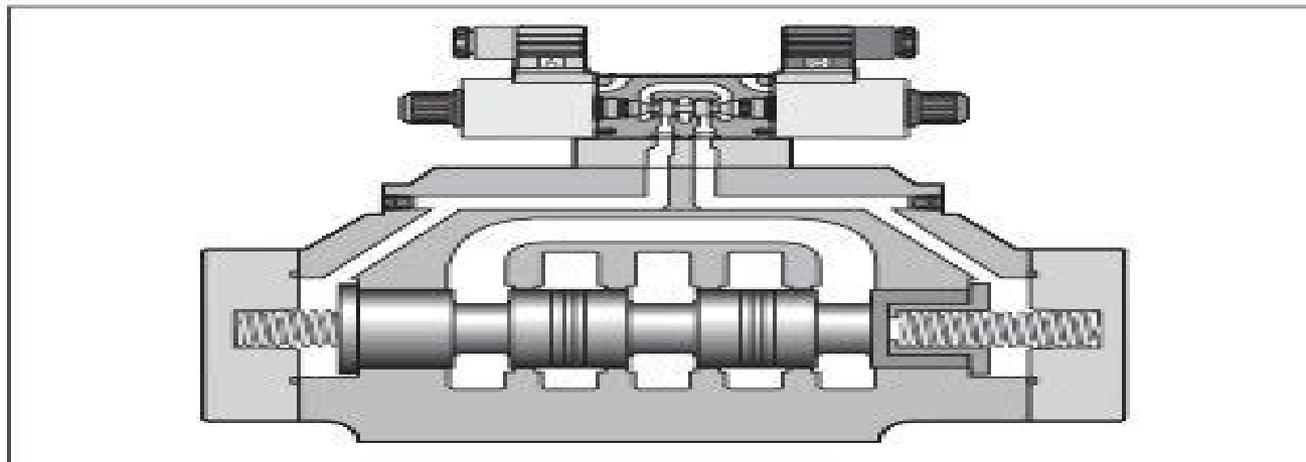

Pressure and flow of the pilot oil have a significant influence on the response time of the spool in the main stage.

In order to guarantee a safe switching of the spool please choose the appropriate pilot oil supply and drain option. (Spools with a connection P to T need an external pressure supply or an integral check valve. For spools with negative cross-over position are the same options recommended.)

The minimum pilot pressure must be ensured for all operating condition of the directional valve.
