Human Factors Models for Aviation Accident Analysis and Prevention Thomas G.C. Griffin, Mark S. Young, Neville A. Stanton, 2017-03-02 The investigation and modelling of aviation accident causation is dominated by linear models. Aviation is however a complex system and as such suffers from being artificially manipulated into non-complex models and methods. This book addresses this issue by developing a new approach to investigating aviation accident causation through information networks. These networks centralise communication and the flow of information as key indicators of a system's health and risk. This holistic approach focuses on the system environment, the activity that takes place within it, the strategies used to conduct this activity, the way in which the constituent parts of the system both human and non-human interact, and the behaviour required. Each stage of this book identifies and expands upon the potential of the information network approach, maintaining firm focus on the overall health of a system. The book's new model offers many potential developments, and some key areas are studied in this research. Through the centralisation of barriers and information nodes, the method can be applied to almost any situation. The application of Bayesian mathematics to historical data populations provides scope for studying error migration and barrier manipulation. The book also provides application of these predictions to a flight simulator study for the purposes of validation. Beyond this, it also discusses the applicability of the approach to industry. Through working with a legacy airline, the methods discussed are used as the basis for a new and prospective safety management system.

Air Crash Investigations: Hard Landing Kills 9, the Crash of Turkish Airlines Flight TK 1951 on Amsterdam Schiphol Airport Igor Korovin, 2010-06-28 On 25 February 2009 a Boeing 737-800 flight TK1951 operated by Turkish Airlines was flying from Istanbul in Turkey to Amsterdam Schiphol Airport. There were 135 people on board. During the approach to the runway at Schiphol airport, the aircraft crashed about 1.5 kilometres from the threshold of the runway. This accident cost the lives of four crew members and five passengers; 120 people sustained injuries. The crash was caused by a malfunctioning radio altimeter and a failure to implement the stall recovery procedure correctly.

Contemporary Ergonomics 2007 Philip D. Bust, 2018-02-06 Presenting the Proceedings of the Ergonomics Society's annual conference, the series embraces the wide range of topics covered by ergonomics. Individual papers provide insight into current practice, present new research findings, and form an invaluable reference source. A wide range of topics are covered in these proceedings, including Ergonomics, Human Factors, and User Centred Design. It also features related disciplines such as Psychology, Engineering, and Physiology. Particular emphasis is given to the utility of these disciplines in improving health, safety, efficiency, and productivity. The 2007 Annual Conference features Human Factors at the heart of systems engineering. As well as being of interest to mainstream ergonomists and human factors specialists, *Contemporary Ergonomics* will appeal to all those who are concerned with the interaction of people with their working and leisure environment, including designers, manufacturing and production engineers, health and safety specialists, occupational, applied, and industrial psychologists, and
