The syntax is simple and it allows the programmers to state their ideas in fewer lines of code. It is an interpreted language and no compilation is necessary. It is often used as a scripting language and it is available on Windows, Mac OS, and UNIX operating systems. The variable and argument declarations are not necessary as it is determined implicitly. One major advantage of using Python is that it is platform independent and you can run it on any operating system without any issues. Many people are scared to get into any type of coding because they think that it will be too hard or that they will never be able to figure it all out.
