Classification, Clustering, and Data Analysis Krzysztof Jajuga,Andrzej Sokolowski,Hans-Hermann Bock,2012-12-06 The present volume contains a selection of papers presented at the Eighth Conference of the International Federation of Classification Societies IFCS which was held in Cracow Poland July 16 19 2002 All originally submitted papers were subject to a reviewing process by two independent referees a

procedure which resulted in the selection of the 53 articles presented in this volume. These articles relate to theoretical investigations as well as to practical applications and cover a wide range of topics in the broad domain of classification data analysis and related methods. If we try to classify the wealth of problems, methods, and approaches into some representative, partially overlapping groups, we find in particular the following areas: Clustering, Cluster validation, Discrimination, Multivariate data analysis, Statistical methods, Symbolic data analysis, Consensus trees and phylogeny, Regression trees, Neural networks and genetic algorithms, Applications in economics, medicine, biology, and psychology. Given the international orientation of IFCS conferences and the leading role of IFCS in the scientific world of classification, clustering, and data analysis, this volume collects a representative selection of current research and modern applications in this field and serves as an up-to-date information source for statisticians, data analysts, data mining specialists, and computer scientists.

Evolutionary Data Clustering: Algorithms and Applications Ibrahim Aljarah, Hossam Faris, Seyedali Mirjalili, 2021-02-20. This book provides an in-depth analysis of the current evolutionary clustering techniques. It discusses the most highly regarded methods for data clustering. The book provides literature reviews about single objective and multi objective evolutionary clustering algorithms. In addition, the book provides a comprehensive review of the fitness functions and evaluation measures that are used in most of evolutionary clustering algorithms. Furthermore, it provides a conceptual analysis including definition, validation, and quality measures, applications, and implementations for data clustering using classical and modern nature-inspired techniques. It features a range of proven and recent nature-inspired algorithms used to data clustering, including particle swarm optimization, ant colony optimization, grey wolf optimizer, salp swarm algorithm, multi-verse optimizer, Harris hawks optimization, beta hill climbing optimization. The book also covers applications of evolutionary data clustering in diverse fields such as image segmentation, medical applications, and pavement infrastructure asset management.

Clustering Rui Xu, Don Wunsch, 2008-11-03. This is the first book to take a truly comprehensive look at clustering. It begins with an introduction to cluster analysis and goes on to explore proximity measures, hierarchical clustering, partition clustering, neural network-based clustering, kernel-based clustering, sequential data clustering, large-scale data clustering, data visualization, and high-dimensional data clustering, and cluster validation. The authors assume no previous background in clustering, and their generous inclusion of examples and references help make the subject matter comprehensible for readers of varying levels and backgrounds.
