Optimization for Engineering Problems Kaushik Kumar, J. Paulo Davim, 2019-07-10 Optimization is central to any problem involving decision making in engineering Optimization theory and methods deal with selecting the best option regarding the given objective function or performance index New algorithmic and theoretical techniques have been developed for this purpose and have rapidly diffused into other disciplines As a result our knowledge of all aspects of the field has grown even more profound In **Optimization for Engineering Problems** eminent researchers in the field present the latest knowledge and techniques on the subject of optimization in engineering Whereas the majority of work in this area focuses on other applications this book applies advanced and algorithm based optimization techniques specifically to problems in engineering
[Global Optimization in Engineering Design](#) Ignacio E. Grossmann, 2013-04-17 Mathematical Programming has been of significant interest and relevance in engineering an area that is very rich in challenging optimization problems In particular many design and operational problems give rise to nonlinear and mixed integer nonlinear optimization problems whose modeling and solution is often nontrivial Furthermore with the increased computational power and development of advanced analysis e.g. process simulators finite element packages and modeling systems e.g. GAMS AMPL SPEEDUP ASCEND gPROMS the size and complexity of engineering optimization models is rapidly increasing While the application of efficient local solvers nonlinear programming algorithms has become widespread a major limitation is that there is often no guarantee that the solutions that are generated correspond to global optima In some cases finding a local solution might be adequate but in others it might mean incurring a significant cost penalty or even worse getting an incorrect solution to a physical problem Thus the need for finding global optima in engineering is a very real one It is the purpose of this monograph to present recent developments of techniques and applications of deterministic approaches to global optimization in engineering The present monograph is heavily represented by chemical engineers and to a large extent this is no accident The reason is that mathematical programming is an active and vibrant area of research in chemical engineering This trend has existed for about 15 years
