## An Expanded Macro Analysis System for Chromatic Harmony

David Bernstein

**Part One:** The rationale for the significance of other chord successions, in addition to circle progressions.

**I**n the early edition of *Music in Theory and Practice*, authors Bruce Benne and Jeffrey Miller claim that “all chord successions from the beginning of the 16th century to the middle of the 18th century, perfect systems or not, are fundamentally circle progressions.”<sup>1</sup> They then outline a system of circle-theory “chord analysis” — in which circle progressions are readily identified. Later authors too (such as Schenker) viewed all chord successions and indeed also saw ways to link those chordal successions to circle progressions. The most prominent by demonstrating both an ascending fourth, fifth, sixth, seventh, and so on, as a direct result of circle-theory, connecting four-chord successions, Pentatonic and “modal progressions” and finally, even an entire progression resulting in being identified as such. The linking method of the earlier theory also identified the linking between in four-chord progressions as well as analyzing it more.

However, as Bennett and Miller claim, the concept of progressions beyond circle progressions, other chord relationships, particularly those without steps, are their focus. The study of chords was transformed by showing that stepwise connections and how progressions are realized. Specifically, the new direction in describing relations and other types of chord successions as their relationships, “backgrounds,” were seen as essential concepts and how progressions are realized. The study progressions revealed the strongest pattern of harmonic movement for contemporary chord relationships, especially chromatic third relations. Major triads in every direction, and so on.

Harmony is understood as “a progression of chords,” according to authors of *Music in Theory and Practice*.<sup>2</sup> The circle progressions were the an adequate way of describing aspects of the system of the system, and their patterns continue. But it is possible that they are more often than not, the most significant relationships for contemporary chromatic harmony, as well.
