# Problem

Obtain the dual for the following problem

Max Z= $3x_1+4x_2$

 Subjected to constraints

$x_1+x_2 \geq 4$

$-x_1+3x_2 \geq -4$

$x_1 \geq 0, x_2 \geq 0$

- The above problem is not in the standard form to write the dual. ( Maximization case all $\leq$ type constraints and all are positive variables)
- First write in standard form i.e $\geq$ type convert in to $\leq$ type constraint.

Max Z= $3x_1+4x_2$

 Subjected to constraints

$-x_1-x_2 \leq -4$

$x_1-3x_2 \leq 4$

V. Shenoy,U. K. Srivastava,S. C. Sharma,1986     Introduction to Optimum Design Jasbir Singh Arora,2004-06-02 Optimization is a mathematical tool developed in the early 1960 s used to find the most efficient and feasible solutions to an engineering problem It can be used to find ideal shapes and physical configurations ideal structural designs maximum energy efficiency and many other desired goals of engineering This book is intended for use in a first course on engineering design and optimization Material for the text has evolved over a period of several years and is based on classroom presentations for an undergraduate core course on the principles of design Virtually any problem for which certain parameters need to be determined to satisfy constraints can be formulated as a design optimization problem The concepts and methods described in the text are quite general and applicable to all such formulations Inasmuch the range of application of the optimum design

methodology is almost limitless constrained only by the imagination and ingenuity of the user The book describes the basic concepts and techniques with only a few simple applications Once they are clearly understood they can be applied to many other advanced applications that are discussed in the text Allows engineers involved in the design process to adapt optimum design concepts in their work using the material in the text Basic concepts of optimality conditions and numerical methods are described with simple examples making the material high teachable and learnable Classroom tested for many years to attain optimum pedagogical effectiveness **Interval Linear Programming and Extensions** Milan Hladík,2025-05-31 This book delves into the intricate world of interval programming offering a comprehensive exploration of mathematical programming problems characterized by interval data Interval data often arising from uncertainties like measurement errors or estimations are also pivotal in analyzing stability sensitivity and managing numerical issues At the heart of this book is the principle of interval analysis ensuring that all possible realizations of interval data are accounted for Readers will uncover a wealth of knowledge as the author meticulously examines how variations in input coefficients affect optimal solutions and values in linear programming The chapters are organized into three parts foundational concepts of interval analysis linear programming with interval data and advanced extensions into multiobjective and nonlinear problems This book invites readers to explore critical questions about stability duality and practical applications across diverse fields With contributions from eminent scholars it provides a unique blend of theoretical insights and practical case studies Designed for both researchers and students with a basic understanding of mathematics this book serves as an essential resource for anyone interested in mathematical programming Whether used as a monograph or a lecture textbook it offers clear explanations and comprehensive proofs to make complex concepts accessible Scholars in operations research applied mathematics and related disciplines will find this volume invaluable for advancing their understanding of interval programming *Introduction to Optimum Design* Jasbir Arora,2011-08-17 Introduction to Optimum Design is the most widely used textbook in engineering optimization and optimum design courses It is intended for use in a first course on engineering design and optimization at the undergraduate or graduate level within engineering departments of all disciplines but primarily within mechanical aerospace and civil engineering The basic approach of the text is to describe an organized approach to engineering design optimization in a rigorous yet simplified manner illustrate various concepts and procedures with simple examples and demonstrate their applicability to engineering design problems Formulation of a design problem as an optimization problem is emphasized and illustrated throughout the text Excel and MATLAB are featured throughout as learning and teaching aids The 3rd edition has been reorganized and enhanced with new material making the book even more appealing to instructors regardless of the level they teach the course Examples include moving the introductory chapter on Excel and MATLAB closer to the front of the book and adding an early chapter on practical design examples for the more introductory course and including a final chapter on advanced topics for the purely graduate level course Basic concepts of optimality conditions and

numerical methods are described with simple and practical examples making the material highly teachable and learnable Applications of the methods for structural mechanical aerospace and industrial engineering problems Introduction to MATLAB Optimization Toolbox Optimum design with Excel Solver has been expanded into a full chapter Practical design examples introduce students to usage of optimization methods early in the book New material on several advanced optimum design topics serves the needs of instructors teaching more advanced courses **Topics in Management Science** Robert E. Markland,1991-01-16 This Third Edition of the popular management science text featuring more concise coverage of topics new case studies for all eighteen chapters and more illustrations tables and diagrams Practical approach teaches students how to use management science techniques in real world situations Contains over 500 problems and 200 discussion questions **Using Duality and Sensitivity Analysis to Interpret Linear Programming Solutions** James Edmund Reeb,2000 **Linear Optimization and Duality** Craig A. Tovey,2020-12-15 Linear Optimization and Dualiyy A Modern Exposition departs from convention in significant ways Standard linear programming textbooks present the material in the order in which it was discovered Duality is treated as a difficult add on after coverage of formulation the simplex method and polyhedral theory Students end up without knowing duality in their bones This text brings in duality in Chapter 1 and carries duality all the way through the exposition Chapter 1 gives a general definition of duality that shows the dual aspects of a matrix as a column of rows and a row of columns The proof of weak duality in Chapter 2 is shown via the Lagrangian which relies on matrix duality The first three LP formulation examples in Chapter 3 are classic primal dual pairs including the diet problem and 2 person zero sum games For many engineering students optimization is their first immersion in rigorous mathematics Conventional texts assume a level of mathematical sophistication they don t have This text embeds dozens of reading tips and hundreds of answered questions to guide such students Features Emphasis on duality throughout Practical tips for modeling and computation Coverage of computational complexity and data structures Exercises and problems based on the learning theory concept of the zone of proximal development Guidance for the mathematically unsophisticated reader About the Author Craig A Tovey is a professor in the H Milton Stewart School of Industrial and Systems Engineering at Georgia Institute of Technology Dr Tovey received an AB from Harvard College an MS in computer science and a PhD in operations research from Stanford University His principal activities are in operations research and its interdisciplinary applications He received a Presidential Young Investigator Award and the Jacob Wolfowitz Prize for research in heuristics He was named an Institute Fellow at Georgia Tech and was recognized by the ACM Special Interest Group on Electronic Commerce with the Test of Time Award Dr Tovey received the 2016 Golden Goose Award for his research on bee foraging behavior leading to the development of the Honey Bee Algorithm **Theory and Methods of Optimisation** Andrea Carpignani,Massimo Pappalardo,2026-02-13 This book originates from the graduate course Theory and Methods of Optimisation taught at the University of Pisa and is primarily intended for students seeking a rigorous yet accessible

introduction to optimisation techniques While designed with graduate students in mind the text is largely self contained and may also be approached by motivated undergraduates with a solid foundation in mathematical analysis linear algebra and the basic topology of Euclidean spaces Key results from differential calculus and topology are recalled throughout ensuring that the material remains accessible without compromising mathematical depth Structured in three parts the text offers a coherent progression from foundational theory to algorithmic methods The first part provides an introduction to convex analysis the second covers the theory of linear and nonlinear programming and the third presents key classical algorithms including the simplex method and gradient based techniques Each chapter builds on previous material with methods presented in detail including pseudocode and full convergence proofs Throughout the book combines theoretical rigour with applied insight Every result is proved and numerous worked examples illustrate the methods in action This dual emphasis gives the work the character of both a rigorous theoretical text and a practical guide to mathematical optimisation The book serves both as an introduction and as a comprehensive reference for those interested in applying mathematical models to real world problems It will be especially valuable to young researchers in applied mathematics looking to understand the theoretical underpinnings of optimisation methods as well as to those working on the practical implementation of such techniques **Elementary Linear Programming with Applications** Bernard Kolman,Robert E. Beck,1980 The disk that comes with the book contains the student oriented linear programming code SMPX written by Professor Evar Nering of Arizona State University The authors also recommend inexpensive linear programming software for personal computers More review material on linear algebra Elementary linear programming covered more efficiently Presentation improved especially for the duality theorem transportation problems the assignment problem and the maximal flow problem New figures and exercises Computer applications updated Added disk with the student oriented linear programming code SMPX written by Professor Evar Nering of Arizona State University New guide to inexpensive linear programming software for personal computers **Linear and Nonlinear Programming** Stephen G.
