```
import java.util.Scanner;
public class Exercise1 {
    public static void main() {
        Scanner scanner = new Scanner(System.in);
    }
}
```

The code starts by creating a `Scanner` object named `scanner`. The `Scanner` class is used to read data from the keyboard. The code then uses the `nextDouble` method to read the data from the keyboard. The code also uses the `println` method to display the results of the calculations.
