

Default methods

Evolve interfaces & create traits

```
//Default methods in interfaces
@FunctionalInterface
interface Utilities {
    default Consumer<Runnable> r() {
        return (r) -> r.run();
    }
    // default methods, still functional
    Object function(Object o);
}
class A implements Utilities { // implement
    public Object function(Object o) {
        return new Object();
    }
    // call a default method
    Consumer<Runnable> c = new A().r();
}
```

Lambdas

Syntax:
{parameters} -> expression
{parameters} -> { statements; }

```
// takes an object, returns an Integer
Function<Long, String> f = (l) -> l.toString();
// takes nothing gives you Threads
Supplier<Thread> s = Thread::currentThread;
// takes a string as the parameter
Consumer<String> c = System.out::println;

// use them with streams
new ArrayList<String>().stream()
// peek: doing streams without changes
peek(e -> System.out.println(e)),
// map: convert every element into something
map(e -> e.hashCode()),
// filter: pass some elements through
filter(e -> ((e.hashCode() % 2) == 0)),
// collect all values from the stream
collect(Collectors.toCollection(TreeSet::new))
```

java.util.Optional

A container for possible null values

```
// Create an optional
Optional<String> optional =
Optional.ofNullable(s);
// process the optional
optional.map(s -> "Rebellabs:" + s);
// map a Function that returns Optional
optional.flatMap(s -> Optional.ofNullable(s));

// run if the value is there
optional.ifPresent(System.out::println);
// get the value or throw an exception
optional.get();

// return the value or the given value
optional.orElse("Hello world!");
// return empty Optional if not satisfied
optional.filter(s -> s.startsWith("Rebellabs"));
```

Rules of Thumb

Traits: 1 default method per interface
Don't enhance functional interfaces
Only conservative implementations

Expressions over statements
Refactor to use method references
Chain lambdas rather than growing them

Fields - use plain objects
Method parameters, use plain objects
Return values - use Optional
Use `orElse()` instead of `get()`

LiveLessons 2nd Edition covers the most important new features introduced in Java 8. The video training is presented by Marty Hall, a bestselling author, world renowned instructor, and president of the training company coreservlets.com. If you are comfortable with previous Java versions and want to learn the new Java 8 features as quickly as possible, continue on. You are in the right place. If however you are new to Java and want to learn the full range of Java programming but in the context of the latest version, Java 8, please see the video Learning Modern Java: A Crash Course Using Java 8 LiveLessons instead.

Description: This LiveLessons video explains the syntax and usage of Java 8 lambda expressions, shows the prebuilt functions, covers streams thoroughly, describes best practices for the use of parallel operations, provides examples of the types of applications to which lambdas and streams are well suited, and shows how applying the power of streams can dramatically simplify file I/O. The final version of Java 8 was released in 2014 and it is by far the most significant upgrade to the Java programming language since at least 2004, probably since Java's inception. In general, Java 8's high-level goals were to make code more flexible, to better use multiple cores, and to more easily deal with large data sets. Specifically, there are four main reasons that it is important for existing Java programmers to know the new Java 8 features:

- More flexible and reusable code thanks to lambdas.
- Lambda expressions in Java 8 are a way of representing functions, and their judicious use can make your code significantly more adaptable and reusable.
- Convenience thanks to high-level Stream methods. Streams are wrappers around collections or other data sources that use lambda expressions pervasively. They support many convenient and high-performance operations that use lambdas, including map, reduce, filter, and forEach. These methods make many types of code much simpler to write compared to the clunky and low-level Collection methods.
- Faster and more memory-efficient code thanks to lazy evaluation and automatic parallelization. Streams support lazy evaluation, so if you map `firstName` over `Employees`, filter ones that start with P, then choose the first, it really only maps and filters until the first match. Streams can also be designated as parallel, so that t
