Engineering Change Management In Sap Xft:

Engineering Change Management Bahram Hamraz, 2014-01 Engineering changes are unavoidable and occur throughout the lifecycle of products. Due to the high interconnectivity of engineering products, a single change to one component usually has knock-on effects on other components, causing further changes. This change propagation significantly affects the success of a product in the market by increasing development cost and time to market. As such, engineering change management is essential to companies, but it is a complex task for managers and researchers alike. To address this challenge, the book at hand investigates the state of the art of research in engineering change management and develops a method to support engineering change propagation analysis, termed FBS Linkage. This method integrates functional reasoning with change prediction. A product is modelled as a network of its functional, behavioural, and structural attributes. Change propagation is then described as spread between the elements along the links of this network.
