Fundamentals of Metal Casting Technology P. C. Mukherjee, 1988 Principles of Metal Manufacturing Processes J. Beddoes, M. Bibby, 1999-05-28

Metals are still the most widely used structural materials in the manufacture of products and structures. Their properties are extremely dependent on the processes they undergo to form the final product. Successful manufacturing therefore depends on a detailed knowledge of the processing of the materials involved. This highly illustrated book provides that knowledge. Metal processing is a technical subject requiring a quantitative approach. This book illustrates this approach with real case studies derived from industry. Real industrial case studies. Quantitative approach. Challenging student problems. *The Gray Iron Castings Handbook* Charles Francis Walton, 1957 Testing, Evaluation and Measurements in Metal Casting Sarat C. Panigrahi, 1987

Metal Casting and Welding Anup Goel, 2020-12-01

Metal casting is the process of producing metal or alloy component parts. In casting, the metal is heated sufficiently to make it into liquid and then poured into moulds of the desired shape. Casting is most often used for making complex shapes so that would be difficult or uneconomical to make by other methods. Welding is a fabrication process that joins materials, usually metals, by using high heat to melt the parts together and allowing them to cool, causing fusion. Many different energy sources can be used for welding, including gas flame, electric arc, a laser and electron beam, friction and ultrasonic. Our hope is that this book, through its careful explanations and concepts and its use of sketches and figures, bridges the gap between knowledge and proper application of that knowledge.
