*Directions:* Write summary statements or definitions for each of the following terms or concepts. Use this as a gauge of how much you already know and what you still need to study. This review should guide your studying. not limit it!

Write your answers in **RED** or another color. **NOT BLACK.**

### **Apex Unit 7**

27. What is crossing over? **the exchange of genes between homologous chromosomes, resulting in a mixture of parental characteristics in offspring.**
28. How does meiosis contribute to genetic variation? **Genetic variation is increased by meiosis**
29. What are three ways we increase genetic variation during meiosis? **We have seen that meiosis creates variation three ways: crossing over, mutations caused during crossing over, and independent assortment.**
30. What is nondisjunction? What does it result in? **Nondisjunction is the failure of homologous chromosomes or sister chromatids to separate properly during cell division.**
31. When does independent assortment happen during meiosis? **When cells divide during meiosis, homologous chromosomes are randomly distributed during anaphase**
32. Difference between a haploid cell and diploid cell? **Haploid cells are those that have only a single set of chromosomes while diploid cells have two sets of chromosomes.**
33. Distinguish between genotype and phenotype? **A genotype refers to the genetic characteristics of an organism. A phenotype refers to the physical characteristics.**
34. How are dominant and recessive alleles different? **Dominant refers to the relationship between two versions of a gene. Individuals receive two versions of each gene, known as alleles, from each parent.**
35. To have a dominant trait how many alleles must a person have? (if it is a single gene trait) **two alleles**
36. Pea plants – why did Mendel use this type of plant? What were his experiments about? **By experimenting with true-breeding pea plants, Mendel avoided the appearance of unexpected traits in offspring that might occur if the plants were not true breeding.**
37. Distinguish between heterozygous/hybrid **A hybrid organism is one that is heterozygous, which means that it carries two different alleles at a particular genetic position, or locus. Therefore, a dihybrid organism is one that is heterozygous at two different genetic loci.**
38. Distinguish between homozygous **homozygous** and heterozygous **and describe of gene pairs with genes that are the same**
39. Cross a plant heterozygous for green pea color with a plant that is heterozygous for yellow pea color. Predict the outcomes of the offspring. **25% of the heterozygous cross are green, and the offspring of a heterozygous cross are green and yellow pea plants will always display the dominant trait (greenness), because they are heterozygous.**
40. If a plant is heterozygous for green peas and purple flowers, what is the genotype of the plant? Write the genetic contribution for the plant. **The phenotype of the heterozygous plant is green peas.**
41. Why do half of your 25% offspring come from each parent? **Each gamete is inherited from your parents, half from your mother and half from your father.**
42. What is the genetic basis for Mendel's Law of Independent Assortment and segregation? **The physical basis of Mendel's law of segregation is the fact that one of a pair of alleles in which the heterozygous individuals with their different versions of each gene are segregated into daughter nuclei.**
43. How many recessive alleles must you have to express an autosomal recessive disorder? **2**
44. If a person is heterozygous for an allele and has the disorder, is the disorder recessive allele disorder or a dominant allele disorder? **Recessive heterozygous are not affected.**
45. What is a "carrier," in genetics terms? **an individual who carries one deleterious allele for an autosomal recessive disorder**
46. What does it mean to be sex-linked? **sex is which a gene is located on a sex chromosome**
  - the allele is on the same genetic position and their associated pedigree.
  - A female carrier for color blindness carries a normal allele. What is the probability that their son will be colorblind? **their son will have 50% chance**
47. Why are sex-linked disorders more common in males than females? **Because females have two copies of the X chromosome and males have only one X chromosome**
