Frontiers of Green Catalytic Selective Oxidations Konstantin P. Bryliakov, 2019-10-02 The demand for novel efficient and environmentally sustainable chemo regio and stereoselective catalyst systems for the oxidation of organic substrates is continuously growing in line with toughening economic and environmental constraints This book addresses these issues it consists of eleven chapters written by world recognized experts in green and sustainable oxidation catalysis The most urgent and challenging topics in the judgment of the editor such as green asymmetric epoxidations sulfoxidations C H oxidations oxidation catalysis by polyoxometalates and oxidations in non conventional solvents etc have been critically reviewed in this book Both fundamental aspects such as catalysts design catalytic properties nature of catalytically active sites and reaction mechanisms and practical outlook of the oxidations have been addressed by the authors The book appeals to a broad readership particularly graduate students employees of universities and research organizations and industrial researchers particularly those working in the areas of homogeneous oxidation catalysis asymmetric synthesis organocatalysis sustainable catalytic processes and green chemistry mechanisms of catalytic reactions synthesis of bioactive compounds biomimetic chemistry etc Konstantin Bryliakov is Leading Researcher at the Boreskov Institute of Catalysis In 2016 he was elected Honorary Professor of the Russian Academy of Sciences

Synthesis of Solid Catalysts Krijn P. de Jong, 2009-06-22 This practical book combines recent progress with a

discussion of the general aspects of catalyst preparation The first part deals with the basic principles of solid catalyst preparation explaining the main aspects of sol gel chemistry and interfacial chemistry followed by such techniques as co precipitation and immobilization New tools for catalyst preparation research including microspectroscopy and high throughput experimentation are also taken into account The second part heightens the practical relevance by providing six case studies on such topics as the preparation of zeolites hydrotreating catalysts methanol catalysts and gold catalysts

Catalytic Aerobic Oxidations Esteban Mejía,2020-07-14 Oxidation reactions are an important chemical transformation in both academia and industry Among the major advances in the field has been the development of catalytic processes which are not only selective and efficient but also allow the replacement of common stoichiometric oxidants with molecular oxygen ideally from air at atmospheric pressure This results in processes with higher atom efficiency where water is the only side product in line with the principles of green chemistry Focusing on the use of molecular oxygen as the terminal oxidant this book covers recent advances in both heterogeneous and homogeneous systems with and without metals and on the taming of the highly reactive oxygen gas by use of micro flow reactors and membranes A useful reference for industrial and academic chemists working on oxidation processes as well as green chemists Catalysis James J. Spivey, Yi-Fan Han,2017-02-27

Catalysts are required for a variety of applications and industrialists and academics are increasingly challenged to find cost effective and environmentally benign catalysts to use This volume looks at modern approaches to catalysis and reviews the extensive literature on areas such as electrochemical promotion of catalysis biodiesel based metals on emission control devices deoxygenation of fatty acids and transitioning rationally designed catalytic materials to real world catalysts produced on a commercial scale *Encyclopedia of Interfacial Chemistry* ,2018-03-29 Encyclopedia of Interfacial Chemistry Surface Science and Electrochemistry Seven Volume Set summarizes current fundamental knowledge of interfacial chemistry bringing readers the latest developments in the field As the chemical and physical properties and processes at solid and liquid interfaces are the scientific basis of so many technologies which enhance our lives and create new opportunities its important to highlight how these technologies enable the design and optimization of functional materials for heterogeneous and electro catalysts in food production pollution control energy conversion and storage medical applications requiring biocompatibility drug delivery and more This book provides an interdisciplinary view that lies at the intersection of these fields Presents fundamental knowledge of interfacial chemistry surface science and electrochemistry and provides cutting edge research from academics and practitioners across various fields and global regions **The British National**

Chemical Reaction Analysis Eugene E. Petersen, 1965 Selective Oxidation by Heterogeneous Catalysis Gabriele Centi, Fabrizio Cavani, Ferruccio Trifirò, 2012-12-06 Selective Oxidation by Heterogeneous Catalysis covers one of the major areas of industrial petrochemical production outlining open questions and new opportunities It gives keys for the interpretation and analysis of data and design of new catalysts and reactions and provides guidelines for future research A distinctive feature of this book is the use of concept by example Rather than reporting an overview of the literature results the authors have selected some representative examples the in depth analysis of which makes it possible to clarify the fundamental but new concepts necessary for a better understanding of the new opportunities in this field and the design of new catalysts or catalytic reactions Attention is given not only to the catalyst itself but also to the use of the catalyst inside the process thus evidencing the relationship between catalyst design and engineering aspects of the process This book provides suggestions for new innovative directions of research and indications on how to reconsider the field of selective oxidation from different perspectives outlining that is not a mature field of research but that new important breakthroughs can be derived from fundamental and applied research Suggestions are offered on how to use less conventional approaches in terms of both catalyst design and analysis of the data
