Section 1.1

1) Write an algorithm that finds the largest number in a list (an array) of n numbers.

Input: positive integer n, list of numbers S indexed from 1 to n

Output: the maximum element in the list S

```
number findMax(int n, const keytype S[ ]) {
    index i;
    number max = S[1];
    for(i =2; i<=n; i++)
            if(S[i] > max)
                    max = S[i];
    return max;
}
```

2) Write an algorithm that finds the m smallest numbers in a list of n numbers.

Input: positive integer n, list of numbers S indexed from 1 to n, empty list of numbers Small indexed from 1 to m.

Output: the list Small with the smallest m numbers in it.

```
void find_m_Smallest(int n, const keytype S[ ], keytype Small[]) {
    index i, j, k;
    Small[1] = S[1];
    for(i =2; i<=n; i++) {
            if (j <=m)
                    find index j where S[i] needs to be inserted in Small, such that\
                            Small stays sorted in non-decreasing order;
            for (k = m-1; k>=j, k--)
                    Small[k+1] = Small[k];         //shift right
            Small[j] = Small[i];                  //insert S[i]
    }
}

Algorithm Design: A Methodological Approach - 150 problems and detailed solutions Patrick Bosc,Marc Guyomard,Laurent Miclet,2023-01-31 A bestseller in its French edition this book is original in its construction and its success in the French market demonstrates its appeal It is based on three principles 1 An organization of the chapters by families of algorithms exhaustive search divide and conquer etc On the contrary there is no chapter devoted only to a systematic exposure of say algorithms on strings Some of these will be found in different chapters 2 For each family of algorithms an introduction is given to the mathematical principles and the issues of a rigorous design with one or two pedagogical examples 3 For the most part the book details 150 problems spanning seven families of algorithms For each problem a precise and progressive statement is given More importantly a complete solution is detailed with respect to the design principles that have been presented often some classical errors are pointed out Roughly speaking two thirds of the book is devoted to the detailed rational construction of the solutions *Evolutionary Algorithms for Solving Multi-Objective Problems* Carlos Coello Coello,David A. Van Veldhuizen,Gary B. Lamont,2013-03-09 Researchers and practitioners alike are increasingly turning to search op timization and machine learning procedures based on natural selection and natural genetics to solve problems across the spectrum of human endeavor These genetic algorithms and techniques of evolutionary computation are solv ing problems and inventing new hardware and software that rival human designs The Kluwer Series on Genetic Algorithms and Evolutionary Computation pub lishes research monographs edited collections and graduate level texts in this rapidly growing field Primary areas of coverage include the theory implemen tation and application of genetic algorithms GAs evolution strategies ESs evolutionary programming EP learning classifier systems LCSs and other variants of genetic and evolutionary computation GEC The series also pub lishes texts in related fields such as artificial life adaptive behavior artificial immune systems agent based systems neural computing fuzzy systems and quantum computing as long as GEC techniques are part of or inspiration for the system being described This encyclopedic volume on the use of the algorithms of genetic and evolu tionary computation for the solution of multi objective problems is a landmark addition to the literature that comes just in the nick of time Multi objective evolutionary algorithms MOEAs are receiving increasing and unprecedented attention Researchers and practitioners are finding an irresistible match be tween the popUlation available in most genetic and evolutionary algorithms and the need in multi objective problems to approximate the Pareto trade off curve or surface **Foundations of Algorithms** Richard E. institutions rejected as untrustworthy the very modern mathematics of French analysis and in its place consolidated legitimated and put to work a different mathematical culture The Neapolitan mathematical resistance was a complete reorientation of mathematical practice Over the unrestricted manipulation and application of algebraic algorithms Neapolitan mathematicians called for a return to Greek style geometry and the preeminence of pure mathematics For all their apparent backwardness Massimo Mazzotti explains they were arguing for what would become crucial features of modern mathematics its voluntary restriction through a new kind of rigor and discipline and the complete disconnection of mathematical truth from the empirical world in other words its purity The Neapolitans Mazzotti argues were reacting to the widespread use of mathematical analysis in social and political arguments theirs was a reactionary mathematics that aimed to technically refute the revolutionary mathematics of the Jacobins During the Restoration the expert groups in the service of the modern administrative state reaffirmed the role of pure mathematics as the foundation of a newly rigorous mathematics which was now conceived as a neutral tool for modernization What Mazzotti s penetrating history shows us in vivid detail is that producing mathematical knowledge was equally about producing certain forms of social political and economic order
