,1985 Numerical Electromagnetic Code (NEC)-Basic Scattering Code. Part 2. Code Manual ,1979 The Numerical  
Electromagnetic Code Basic Scattering Code is a user oriented computed code for the analysis of the far field patterns of  
antennas in the presence of perfectly conducting metal structures at UHF and above The analysis is based on uniform  
asymptotic techniques formulated in terms of the Geometrical Theory of Diffraction GTD Complicated structures can be  
simulated by arbitrarily oriented flat plates an infinite ground plane and a finite elliptic cylinder A wide range of practical  
problems can be simulated using these shapes For example flat plates can be used to model the superstructure of a ship the  
body of a truck or the wings and stores of an aircraft The finite elliptic cylinder can be used to model a mast or smoke stack  
of a ship or the fuselage and engines of an aircraft This document describes the FORTRAN coding in detail It gives  
background on practical aspects of the GTD and contains an overview of the code organization This information will be of  
primary interest to someone attempting to modify the code It will also be helpful when the code is being implemented on a  
computer system on which the coding may not be compatible **Numerical Electromagnetic Code (NEC)-Basic

the code by comparing various computed results against measured data whenever available It also describes in detail the
