Quick Start Guide for installing Linux on Power Systems servers

This guide helps you install Linux on a stand-alone Power Systems server that has a graphics card.

Overview

Use this information to install Linux on a Power Systems server that has a graphics card installed. This installation assumes an unmanaged (stand-alone) system.

1 Step 1: Complete the prerequisites

Before you install Linux on your system, ensure that you have the following items:

- USB keyboard and mouse
- Monitor
- Power cords and outlet for your system. Depending on your configuration, your system might require 220 V. For instructions, see the IBM Knowledge Center and search for your Power hardware model: IBM Knowledge Center.
- Distribution media

2 Step 2: Prepare to power on

Before you power on the system, follow these steps:

- If your system belongs in a rack, install your system into that rack. For instructions, see the IBM Knowledge Center and search for your Power hardware model: IBM Knowledge Center.
- Remove the shipping brackets from the power supplies. Ensure that the power supplies are fully seated in the system.
- Connect the monitor, mouse, and keyboard
- Connect the power cords to the system and plug them into the outlets.

After you connect the power cords, your firmware boots. Wait for a few minutes for this process to complete. Look for the green power LED on the control panel to start flashing, indicating that it is ready to use, and for the prompt 01 N V=N to display in the control panel window.

For information about accessing and using the control panel, see the Control panel topic at https://ibm.biz/BdYjwz.

3 Step 3: Power on the system

After the firmware boots, you can power on the system. Press and hold the white power-on button on the front of the control panel for 3 seconds to start the server.

As the system powers up, you might notice the following:

- System reference codes display on the control panel while the system is being started.
- The power LED continues to flash and speeds up.
- The system cooling fans are activated after approximately 30 seconds and begin to accelerate to operating speed.
- The power LED on the control panel stops flashing and remains on, indicating that system power is on.

Note: If you system fails to start, verify that the prompt 01 N V=N is displaying in the control panel and green power LED is flashing green.

When the system is powered on, the monitor activates and the Boot selection window is displayed.

Note: You can also connect to your system using the Advanced System Management Interface (ASMI). For instructions, see the IBM Knowledge Center and search for your Power hardware model: IBM Knowledge Center.
