Chapter 2: Probability, Statistics, and Traffic Theories

- P2.1.** A random number generator produces numbers between 1 and 99. If the current value of the random variable is 45, then what is the probability that the next randomly generated value for the same random variable, will also be 45. Explain clearly.

[Solution]

Let the random variable be X such that $1 \leq X \leq 99$.
Current value of

Since the value of generation of random numbers is independent of the previous generation, the probability of generating 45 again is the same as for the first time. Hence,

$$P(X = 45) = \frac{1}{99}.$$

- P2.2.** A random digit generator on a computer is activated three times consecutively to simulate a random three-digit number.
- (a) How many random three-digit numbers are possible?
 - (b) How many numbers will begin with the digit 2?
 - (c) How many numbers will end with the digit 9?
 - (d) How many numbers will begin with the digit 2 and end with the digit 9?
 - (e) What is the probability that a randomly formed number ends with 9 given that it begins with a 2?

[Solution]

- (a) 900
- (b) 100
- (c) 90
- (d) 10
- (e) 1/10

- P2.3.** A snapshot of the traffic pattern in a cell with 10 users of a wireless system is given as follows:

Encyclopedia of Developing Regional Communities with Information and Communication Technology Marshall, Stewart, Taylor, Wal, Yu, Xinghuo, 2005-06-30 This encyclopedia provides a thorough examination of concepts technologies policies training and applications of ICT in support of economic and regional developments around the globe Provided by publisher

[Design Solutions for User-Centric Information Systems](#) Saeed, Saqib, Bamarouf, Yasser A., Ramayah, T., Iqbal, Sardar Zafar, 2016-12-21 Continuous improvements in technological applications have allowed more opportunities to develop systems with user focused designs This not only leads to higher success in day to day usage but it increases the overall probability of technology adoption Design Solutions for User Centric Information Systems provides a comprehensive examination of the latest strategies and methods for creating technological systems with end users as the focal point of the design process Highlighting innovative practices and applications across a variety of areas such as cloud based computing services e government adoption and logistics evaluation this book is an ideal reference source for computer engineers practitioners project managers graduate students and researchers interested in the enhancement of user centric information system development

Smart Grid Stephen F. Bush, 2014-03-31 This book bridges the divide between the fields of power systems engineering and computer communication through the new field of power system information theory Written by an expert with vast experience in the field this book explores the smart grid from generation to consumption both as it is planned today and how it will evolve tomorrow The book focuses upon what differentiates the smart grid from the traditional power grid as it has been known for the last century Furthermore the author provides the reader with a fundamental understanding of both power systems and communication networking It shows the complexity and operational requirements of the evolving power grid the so called smart grid to the communication networking engineer and similarly it shows the complexity and operational requirements for communications to the power systems engineer The book is divided into three parts Part One discusses the basic operation of the electric power grid covering fundamental knowledge that is assumed in Parts Two and Three Part Two introduces communications and networking which are critical enablers for the smart grid It also considers how communication and networking will evolve as technology develops This lays the foundation for Part Three which utilizes communication within the power grid Part Three draws heavily upon both the embedded intelligence within the power grid and current research anticipating how and where computational intelligence will be implemented within the smart grid Each part is divided into chapters and each chapter has a set of questions useful for exercising the readers understanding of the material in that chapter

Key Features Bridges the gap between power systems and communications experts Addresses the smart grid from generation to consumption both as it is planned today and how it will likely evolve tomorrow Explores the smart grid from the perspective of traditional power systems as well as from communications Discusses power systems communications and machine learning that all define the smart grid It introduces the new field of
