Java Enterprise Best Practices Robert Eckstein, 2002. Crammed with tips and tricks. Java Enterprise Best Practices distills years of solid experience from eleven experts in the J2EE environment into a practical to the point guide to J2EE. Java Enterprise Best Practices gives developers the unvarnished expert tested advice that the man pages don't provide: what areas of the APIs should be used frequently and which are better avoided; elegant solutions to problems you face that other developers have already discovered; what things you should always do; what things you should consider doing; and what things you should never do even if the documentation says it's ok.

Java Enterprise in a Nutshell Jim Farley, William Crawford, David Flanagan, 2002. The Java Enterprise APIs are building blocks for creating enterprise wide distributed applications in Java. Java Enterprise in a Nutshell covers the RMI, Java IDL, JDBC, JNDI, Java Servlet and Enterprise JavaBeans APIs with a fast paced tutorial and compact reference material on each technology.

Better, Faster, Lighter Java Bruce Tate, Justin Gehtland, 2004-05-28. Sometimes the simplest answer is the best. Many Enterprise Java developers accustomed to dealing with Java's spiraling complexity have fallen into the habit of choosing overly complicated solutions to problems when simpler options are available. Building server applications with heavyweight Java based architectures such as WebLogic, JBoss and WebSphere can be costly and cumbersome. When you've reached the point where you spend more time writing code to support your chosen framework than to solve your actual problems it's time to think in terms of simplicity. In Better, Faster, Lighter Java authors Bruce Tate and Justin Gehtland argue that the old heavyweight architectures are unwieldy, complicated and contribute to slow and buggy application code. As an alternative means for building better applications the authors present two lightweight open source architectures: Hibernate a persistence framework that does its job with a minimal API and gets out of the way and Spring a container that's not invasive, heavy or complicated. Hibernate and Spring are designed to be fairly simple to learn and use and place reasonable demands on system resources. Better, Faster, Lighter Java shows you how they can help you create enterprise applications that are easier to maintain, write and debug and are ultimately much faster. Written for intermediate to advanced Java developers, Better, Faster, Lighter Java offers fresh ideas often unorthodox to help you rethink the way you work and techniques and principles you'll use to build simpler applications. You'll learn to spend more time on what's important. When you're finished with this book you'll find that your Java is better.
