Instructions

1. Read the sections in the textbook, *Using the Properties of Logarithms* and *Graphing Logarithmic Functions*, and their respective Examples, and their respective Guided Practice.
2. Each group receives a set of **group work** questions with work sheets and a few minutes to read **before** class (not group meeting, necessarily) so that each student understands the questions before class begins and has some time to think.
3. Each class gets a few minutes to think through the work. Properly used **group work** is a more effective way to learn.
4. The group leader will facilitate the activity. **Remember**, we don't just want students to answer, we want them to **think**. Ask the group to discuss the problem and then have each student write down their answer. The class group meeting time is for the group to discuss their answers and get ready to talk with the class. **Remember**, each student has a role to play.
5. After the group meeting, each student will have a question or a **short** **problem** to work on. **Remember** that the class meeting is for the group to discuss the work and get ready to talk with the class. **Remember**, we don't just want students to answer, we want them to **think**. Ask the group to discuss the problem and then have each student write down their answer. The class group meeting time is for the group to discuss their answers and get ready to talk with the class. **Remember**, each student has a role to play.
6. After the meeting, the teacher will have a question or a **short** **problem** to work on. **Remember** that the class meeting is for the group to discuss the work and get ready to talk with the class. **Remember**, we don't just want students to answer, we want them to **think**.
