Data Analysis with Machine Learning for Psychologists Chandril Ghosh,2022-10-17 The power of data drives the digital economy of the 21st century It has been argued that data is as vital a resource as oil was during the industrial revolution An upward trend in the number of research publications using machine learning in some of the top journals in combination with an increasing number of academic recruiters within psychology asking for Python knowledge from applicants indicates a growing demand for these skills in the market While there are plenty of books covering data science rarely if ever books in the market address the need of social science students with no computer science background They are typically written by engineers or computer scientists for people of their discipline As a result often such books are filled with technical jargon and examples irrelevant to psychological studies or projects In contrast this book was written by a psychologist in a simple easy to understand way that is brief and accessible The aim for this book was to make the learning experience on this topic as smooth as possible for psychology students researchers with no background in programming or data science Completing this book will also open up an enormous amount of possibilities for quantitative researchers in psychological science as it will enable them to explore newer types of research questions
