Java 2 Enterprise Edition 1.4 (J2EE 1.4) Bible James McGovern, Rahim Adatia, Yakov Fain, Jason Gordon, Ethan Henry, Walter Hurst, Ashish Jain, Mark Little, Vaidyanathan Nagarajan, Harshad Oak, Lee Anne Phillips, 2011-09-23 Java 2 Enterprise Edition J2EE is the specification that all enterprise Java developers need to build multi tier applications and also the basis for BEA s WebLogic Application Server and IBM s WebSphere Revised to be current with

the significant J2EE 1.4 update that will drive substantial developer interest. Written by a top selling team of eleven experts who provide unique and substantial business examples in a vendor neutral format making the information applicable to various application servers. Covers patterns, J2EE application servers, frameworks, Ant and continuous availability. Includes extensive intermediate and advanced coverage of J2EE APIs. Companion Web site provides additional examples and information.

Enterprise Java Developer's Guide S. Narayanan, Junhe Liu, 1999. The tools covered in this book include Netscape Enterprise Server, LDAP Server, Access and Oracle databases, Java Web Server and the Java Studio IDE. The book demonstrates Java based email messaging database and servlet applications. The CD ROM includes demos of applications plus shareware utilities.

Java Enterprise Best Practices Robert Eckstein, 2002. Crammed with tips and tricks. Java Enterprise Best Practices distills years of solid experience from eleven experts in the J2EE environment into a practical to the point guide to J2EE. Java Enterprise Best Practices gives developers the unvarnished, expert tested advice that the man pages don't provide: what areas of the APIs should be used frequently and which are better avoided; elegant solutions to problems you face that other developers have already discovered; what things you should always do; what things you should consider doing; and what things you should never do even if the documentation says it's ok.

Java Enterprise in a Nutshell Jim Farley, William Crawford, David Flanagan, 2002. The Java Enterprise APIs are building blocks for creating enterprise wide distributed applications in Java. Java Enterprise in a Nutshell covers the RMI, Java IDL, JDBC, JNDI, Java Servlet and Enterprise JavaBeans APIs with a fast paced tutorial and compact reference material on each technology.

Better, Faster, Lighter Java Bruce Tate, Justin Gehtland, 2004-05-28. Sometimes the simplest answer is the best. Many Enterprise Java developers accustomed to dealing with Java's spiraling complexity have fallen into the habit of choosing overly complicated solutions to problems when simpler options are available. Building server applications with heavyweight Java based architectures such as WebLogic, JBoss and WebSphere can be costly and cumbersome. When you've reached the point where you spend more time writing code to support your chosen framework than to solve your actual problems it's time to think in terms of simplicity. In Better, Faster, Lighter Java authors Bruce Tate and Justin Gehtland argue that the old heavyweight architectures are unwieldy, complicated and contribute to slow and buggy application code. As an alternative means for building better applications the authors present two lightweight open source architectures: Hibernate a persistence framework that does its job with a minimal API and gets out of the way and Spring a container that's not invasive, heavy or complicated. Hibernate and Spring are designed to be fairly simple to learn and use and place reasonable demands on system resources. Better, Faster, Lighter Java shows you how they can help you create enterprise applications that are easier to maintain, write and debug and are ultimately much faster. Written for intermediate to advanced Java developers, Better, Faster, Lighter Java offers fresh ideas, often unorthodox, to help you rethink the way you work and techniques and principles you'll use to build simpler applications. You'll learn to spend more time on what's important. When you're finished with this book you'll find that your Java is better.

faster and lighter than ever before

Projects in Enterprise Java, 2018 Java Enterprise isn't one of the easiest platforms to work with especially when it comes with a number of different confusing paradigms and jargon JDBC JTA JAX MVC Hibernate and so on to name a few Add other technologies such as MySQL and Struts and you're bound to leave someone more confused than when they started Common courses often leave the user with the basics such as creating a simple application and you are okay You can follow along with the instructor and finish the project and then replicate it but the moment you are asked to modify the application for real world use you won't know what to do How do you fix the errors or even know what the pop up error means This is why we have designed this comprehensive course The main aim of this Java EE tutorial is to help you gain real world practical application knowledge of Java Enterprise This course will show you exactly how to deviate from the theory to actually learning how to start building your own applications Using a project based approach you'll not only follow the instructor but you'll also learn why and how in addition to simply what Before we delve into the course details further let's take a quick look at what Java Enterprise actually is Java Enterprise is a set of specifications that extend the Java SE platform and allow developers to build scalable applications that can handle transactions security concurrency and so on Resource description page
