Robinson,2004-01-08 This refreshing introductory textbook covers both standard techniques for solving ordinary differential equations as well as introducing students to qualitative methods such as phase plane analysis The presentation is concise informal yet rigorous it can be used either for 1 term or 1 semester courses Topics such as Euler s method difference equations the dynamics of the logistic map and the Lorenz equations demonstrate the vitality of the subject and provide pointers to further study The author also encourages a graphical approach to the equations and their solutions and to that end the book is profusely illustrated The files to produce the figures using MATLAB are all provided in an accompanying website Numerous worked examples provide motivation for and illustration of key ideas and show how to make the transition from theory to practice Exercises are also provided to test and extend understanding solutions for these are available for teachers **Mathematical Methods for Scientists and Engineers** Donald Allan McQuarrie,2003 Intended for upper level undergraduate and graduate courses in chemistry physics math and engineering this book will also become a must have for the personal library of all advanced students in the physical sciences Comprised of more than 2000 problems and 700 worked examples that detail every single step this text is exceptionally well adapted for self study as well as for course use From publisher description **Nonlinear Higher Order Differential And Integral Coupled Systems: Impulsive And Integral Equations On Bounded And Unbounded Domains** Feliz Manuel Minhos,Robert De Sousa,2022-04-11 Boundary value problems on bounded or unbounded intervals involving two or more coupled systems of nonlinear differential and integral equations with full nonlinearities are scarce in

the literature The present work by the authors desires to fill this gap The systems covered here include differential and integral equations of Hammerstein type with boundary constraints on bounded or unbounded intervals These are presented in several forms and conditions three points mixed with functional dependence homoclinic and heteroclinic amongst others This would be the first time that differential and integral coupled systems are studied systematically The existence and in some cases the localization of the solutions are carried out in Banach space following several types of arguments and approaches such as Schauder's fixed point theorem or Guo Krasnosel'skiĭ fixed point theorem in cones allied to Green's function or its estimates lower and upper solutions convenient truncatures the Nagumo condition presented in different forms the concept of equiconvergence Carathéodory functions and sequences Moreover the final part in the volume features some techniques on how to relate differential coupled systems to integral ones which require less regularity Parallel to the theoretical explanation of this work there is a range of practical examples and applications involving real phenomena focusing on physics mechanics biology forestry and dynamical systems which researchers and students will find useful
