Principles of Assessment and Outcome Measurement for Occupational Therapists and Physiotherapists Alison Laver Fawcett, 2013-03-15 This textbook on assessment and outcome measurement is written for both occupational therapy and physiotherapy students and qualified therapists. It begins by defining what is meant by assessment, outcome evaluation and measurement and discussing the complexity of therapy assessment and measurement including the challenge of measuring human behaviour and the impact of factors such as task demand and context including the environment. Methods of data collection e.g. observation, interview, standardised testing and sources e.g. self-report, proxy for collecting information about clients are then reviewed and the main purposes of assessment e.g. descriptive, evaluative, predictive, discriminative presented. The book then addresses the topics of standardisation, levels of measurement, reliability, validity and clinical utility. There is a chapter describing and applying models for categorizing levels of function to aid assessment and measurement. The concept of clinical reasoning and reflective practice is then explored. Application of principles is supported through detailed case studies and worksheets and the criteria for test critique and guidelines for choosing a particular assessment approach are discussed.

Judicial Review in Equal Treatment Cases Janneke Gerards, 2005-05-01 In this study an assessment model is developed to guide courts in deciding equal treatment cases Such a model appears to be indispensable since relevant equality provisions often do not offer much guidance as to the assessment of unequal treatment This lack of guidance may lead to diverging approaches and outcomes which is undesirable from the perspective of equality and legal certainty The use of the assessment model developed in this study will improve judicial reasoning and enhance the legitimacy of equal treatment case law The general assessment model developed in this study is based on theoretical research after the standards that should be used in assessing cases against the principle of equal treatment supplemented by an elaborate comparative analysis of the equal treatment case law in various legal systems The result of this approach is the design of an assessment model that is both theoretically sound and workable in practice The Dutch edition of this book has been awarded with the Erasmus Study Prize 2003 the Max van der Stoep Human Rights Prize and the Constitutional Law Prize
