Contemporary Communication Systems Using MATLAB John G. Proakis, Masoud Salehi, 2000 This supplement to any standard communication systems text is one of the first books to successfully integrate the use of MATLAB in the study of communication systems concepts and problems It has been developed for instructors and students who wish to make use of MATLAB as an integral part of their study The former will find the means by which to use MATLAB as a powerful tool to motivate students and illustrate essential theory without having to customize the applications themselves the latter will find relevant problems quickly and easily The book includes numerous MATLAB based simulations and examples of communication systems while providing a good balance of theory and hands on computer experience This Updated Printing revises the book and MATLAB files available for downloading from the Brooks Cole Bookware Companion Resource Center Web Site to MATLAB V5

Contemporary Communication Systems Using MATLAB John G. Proakis, Masoud Salehi, 1998 This text contains a large number of MATLAB based problems dealing with topics covered in a first course in communication systems Each chapter contains fundamental concepts briefly reviewed and presents illustration problems

A Tutorial on Queuing and Trunking with Applications to Communications William Tranter, Allen B. MacKenzie, 2022-05-31 The motivation for developing this synthesis lecture was to provide a tutorial on queuing and trunking with extensions to networks of queues suitable for supplementing courses in communications stochastic processes and networking An essential component of this lecture is MATLAB based demonstrations and exercises which can be easily modified to enable the student to observe and evaluate the impact of changing parameters arrival and departure statistics queuing disciplines the number of servers and other important aspects of the underlying system model Much of the work in this lecture is based on Poisson statistics since Poisson models are useful due to the fact that Poisson models are analytically tractable and provide a useful approximation for many applications We recognize that the validity of Poisson statistics is questionable for a number of networking applications and therefore we briefly discuss self similar models and the Hurst parameter long term dependent models the Pareto distribution and other related topics Appropriate references are given for continued study on these topics The initial chapters of this book consider individual queues in isolation The systems studied consist of an arrival process a single queue with a particular queuing discipline and one or more servers While this allows us to study the basic concepts of queuing and trunking modern data networks consist of many queues that interact in complex ways While many of these interactions defy analysis the final chapter introduces a model of a network of queues in which after being served in one queue customers may join another queue The key result for this model is known as Jackson's Theorem Finally we state the BCMP Theorem which can be viewed as a further extension of Jackson's Theorem and present Kleinrock's formula which can be viewed as the network version of Little's Theorem

Performance Analysis and Modeling of Digital Transmission Systems William Turin, 2012-12-06 This book is an expanded third edition of the book *Performance Analysis of Digital Transmission Systems* originally published in 1990 Second edition of the book titled *Digital Transmission Systems Performance Analysis and Modeling* was published in 1998 The book is intended for those who design communication systems and networks A computer network designer is interested in selecting communication channels error protection schemes and link control protocols To do this efficiently one needs a mathematical model that accurately predicts system

behavior Two basic problems arise in mathematical modeling the problem of identifying a system and the problem of applying a model to the system analysis System identification consists of selecting a class of mathematical objects to describe fundamental properties of the system behavior We use a specific class of hidden Markov models HMMs to model communication systems This model was introduced by C E Shannon more than 50 years ago as a Noisy Discrete Channel with a finite number of states The model is described by a finite number of matrices whose elements are estimated on the basis of experimental data We develop several methods of model identification and show their relationship to other methods of data analysis such as spectral methods autoregressive moving average CARMA approximations and rational transfer function approximations

Problem-Based Learning in Communication Systems Using MATLAB and Simulink Kwonhue Choi,Huaping Liu,2016-02-10 Designed to help teach and understand communication systems using a classroom tested active learning approach Discusses communication concepts and algorithms which are explained using simulation projects accompanied by MATLAB and Simulink Provides step by step code exercises and instructions to implement execution sequences Includes a companion website that has MATLAB and Simulink model samples and templates password matlab

Principles of Communications Rodger E. Ziemer,William H. Tranter,2014-03-17 Ziemer and Tranter provide a thorough treatment of the principles of communications at the physical layer suitable for college seniors beginning graduate students and practicing engineers This is accomplished by providing overviews of the necessary background in signal system probability and random process theory required for the analog and digital communications topics covered in the book In addition to stressing fundamental concepts the seventh edition features sections on important areas such as spread spectrum cellular communications and orthogonal frequency division multiplexing While the book is aimed at a two semester course more than enough material is provided for structuring courses according to students need and instructor preference

Communication Systems Modeling and Simulation using MATLAB and Simulink K. C.

Raveendranathan,2011-09-07 This is probably the first book that employs the technique of simulation experiments as a means of reinforcing the basic concepts of communication theory Undergraduate students are generally exposed to a mathematically rigorous treatment of communications theory but seldom have the benefit of a practical orientated approach employing modelling and simulation for a thorough assimilation of the subject This book can supplement any standard textbook to cover this significant lacuna in the existing learning methodology It uses MATLAB the language of the technical computing fraternity for the purpose The introductory chapters provide an overview of computer simulation and MATLAB programming concepts Thereafter communications concepts are presented in the traditional manner but followed up with appropriate simulations in MATLAB Simulink Relevant MATLAB source code is given whenever it is used to illustrate a point All the source code given in the text has been tested on MATLAB kernel version 7 10 Release R2010a and is provided in the accompanying CD
