You have begun a research project in a genetics laboratory that studies the fruit fly *Drosophila melanogaster*. Your research adviser decides to give you an interesting mutant fly called **grounded** that has just been discovered in one of the fly vials in the lab. In addition, you are also given two **wild-type** flies (male and female). All 3 flies can be found within the **Strains Box**.

1 First, describe the sex and phenotype of the mutant fly. Describe the phenotype as it compares to wild type.

- The sex and phenotype of each fly should be visually obvious. You can also obtain this information by clicking on the fly and looking at the **Properties** window.

Answer:

2 You want to determine the genotype of **grounded**. You are unsure whether its phenotype is caused by a **dominant** or **recessive** allele. You are also not sure if **grounded** is **autosomal** or not. To determine its genotype, cross **grounded** with one of the **wild-type** flies.

- Set up a cross between **grounded** and a **wild-type** fly by dragging each to the **Mating Site** and by clicking on the **Mate** button.
- Each resulting offspring can be viewed within the **Individual** tab or a summary of the results is available on the **Summary** tab.

Answer
