**Parallel Computer Architecture: A Hardware/Software Approach** David E. Culler, 2010-01-01      **Parallel Computer Architecture** David E. Culler, 2000      Parallel Computer Architecture J. P. Singh, Anoop Gupta,      The Computer Engineering Handbook Vojin G. Oklobdzija, 2001-12-26 There is arguably no field in greater need of a comprehensive handbook than computer engineering The unparalleled rate of technological advancement the explosion of computer applications and the now in progress migration to a wireless world have made it difficult for engineers to keep up with all the developments in specialties outside their own References published only a few years ago are now sorely out of date The Computer Engineering Handbook changes all of that Under the leadership of Vojin Oklobdzija and a stellar editorial board some of the industry s foremost experts have joined forces to create what promises to be the definitive resource for computer design and engineering Instead of focusing on basic introductory material it forms a comprehensive state of the art review of the field s most recent achievements outstanding issues and future directions The world of computer engineering is vast and evolving so rapidly that what is cutting edge today may be obsolete in a few months While exploring the new developments trends and future directions of the field The Computer Engineering Handbook captures what is fundamental and of lasting value      *Readings in Computer Architecture* Mark D. Hill, Gurindar S. Sohi, 2000 Offering a carefully reviewed selection of over 50 papers illustrating the breadth and depth of computer architecture this text includes insightful introductions to guide readers through the primary sources      **Crossbar-Based Interconnection Networks** Mohsen Jahanshahi, Fathollah Bistouni, 2018-04-10 This unique text reference provides an overview of crossbar based interconnection networks offering novel perspectives on these important components of high performance parallel processor systems A particular focus is placed on solutions to the blocking and scalability problems Topics and features introduces the fundamental concepts in interconnection networks in multi processor systems including issues of blocking scalability and crossbar networks presents a classification of interconnection networks and provides information on recognizing each of the networks examines the challenges of blocking and scalability and analyzes the different solutions that have been proposed reviews a variety of different approaches to improve fault tolerance in multistage interconnection networks discusses the scalable crossbar network which is a non blocking interconnection network that uses small sized crossbar switches as switching elements This invaluable work will be of great benefit to students researchers and practitioners interested in computer networks parallel processing and reliability engineering The text is also essential reading for course modules on interconnection network design and reliability      *Computer Organisation and Architecture* Pranabananda Chakraborty, 2020-09-30 Computer organization and architecture is becoming an increasingly important core subject in the areas of computer science and its applications and information technology constantly steers the relentless revolution going on in this discipline This textbook demystifies the state of the art using a simple and step by step development from

traditional fundamentals to the most advanced concepts entwined with this subject maintaining a reasonable balance among various theoretical principles numerous design approaches and their actual practical implementations Being driven by the diversified knowledge gained directly from working in the constantly changing environment of the information technology IT industry the author sets the stage by describing the modern issues in different areas of this subject He then continues to effectively provide a comprehensive source of material with exciting new developments using a wealth of concrete examples related to recent regulatory changes in the modern design and architecture of different categories of computer systems associated with real life instances as case studies ranging from micro to mini supermini mainframes cluster architectures massively parallel processing MPP systems and even supercomputers with commodity processors Many of the topics that are briefly discussed in this book to conserve space for new materials are elaborately described from the design perspective to their ultimate practical implementations with representative schematic diagrams available on the book s website Key Features Microprocessor evolutions and their chronological improvements with illustrations taken from Intel Motorola and other leading families Multicore concept and subsequent multicore processors a new standard in processor design Cluster architecture a vibrant organizational and architectural development in building up massively distributed parallel systems InfiniBand a high speed link for use in cluster system architecture providing a single system image FireWire a high speed serial bus used for both isochronous real time data transfer and asynchronous applications especially needed in multimedia and mobile phones Evolution of embedded systems and their specific characteristics Real time systems and their major design issues in brief Improved main memory technologies with their recent releases of DDR2 DDR3 Rambus DRAM and Cache DRAM widely used in all types of modern systems including large clusters and high end servers DVD optical disks and flash drives pen drives RAID a common approach to configuring multiple disk arrangements used in large server based systems A good number of problems along with their solutions on different topics after their delivery Exhaustive material with respective figures related to the entire text to illustrate many of the computer design organization and architecture issues with examples are available online at <http://crcpress.com> 9780367255732 This book serves as a textbook for graduate level courses for computer science engineering information technology electrical engineering electronics engineering computer science BCA MCA and other similar courses
