Human Factors in the Design and Evaluation of Central Control Room Operations Neville A.

Stanton, Paul Salmon, Daniel Jenkins, Guy Walker, 2009-11-18 Whether used for aviation, manufacturing, oil and gas extraction, energy distribution, nuclear or fossil fuel power generation, surveillance, or security, all control rooms share two common features: The people operating them are often remote from the processes that they are monitoring and controlling, and the operations work 24/7. The twin demands of

Delay and Uncertainty in Human Balancing Tasks Tamás Insperger, John

Milton, 2021-10-18 This book demonstrates how delay differential equations (DDEs) can be used to complement the laboratory investigation of human balancing tasks. This approach is made accessible to non-specialists by comparing mathematical predictions and experimental observations. For example, the observation that a longer pole is easier to balance on a fingertip than a shorter one demonstrates the essential role played by a time delay in the balance control mechanism. Another balancing task considered is postural sway during quiet standing. With the inverted pendulum as the driver and the feedback control depending on state variables or on an internal model, the feedback can be identified by determining a critical pendulum length and/or a critical delay. This approach is used to identify the nature of the feedback for the pole balancing and postural sway examples. Motivated by the question of how the nervous system deals with these feedback control challenges, there is a discussion of microchaotic fluctuations in balance control and how robust control can be achieved in the face of uncertainties in the estimation of control parameters. The final chapter suggests some topics for future research. Each chapter includes an abstract and a point-by-point summary of the main concepts that have been established. A particularly useful numerical integration method for the DDEs that arise in balance control is semi-discretization. This method is described and a MATLAB template is provided. This book will be a useful source for anyone studying balance in humans, other bipedal organisms, and humanoid robots. Much of the material has been used by the authors to teach senior undergraduates in computational neuroscience and students in bio-systems, biomedical, mechanical, and neural engineering. *Quarterly Journal of the Chemical Society of London* Chemical Society (Great Britain), 1968 *Science Citation Index*, 1994 Vols for 1964 have guides and journal lists. **The Dementias, Policy and Management** Mary L.
