

Longitudinal Data Analysis: Stata Tutorial

Part A: Overview of Stata

I. Reading Data

- `use`
Read data that have been saved in Stata format.
- `infile`
Read raw data and “dictionary” files.
- `import`
Read spreadsheets saved as “CSV” files from a package such as Excel.

II. Do Files

- **What is a do file?**
A “do” file is a set of commands just as you would type them in one-by-one during a regular Stata session. Any command you use in Stata can be part of a do file. Do files are very useful, particularly when you have many commands to issue repeatedly, or to reproduce results with minor or no changes.

Example: `cd4-readin.do`

```
* Read in cd4 raw data and create stata data set.

*== Using non-numeric == replace
*== primary file
*== Use case control data except read in using use

*== Summary = summary(060,15,1)
*== =====

label var id          "subject ID"
label var time        "years since recruitment"
label var timeyears   "days since recruitment"
label var cell        "cell count"
label var age         "age (year relative to arbitrary origin)"
label var packets     "packets of cigarettes smoked per day"
label var drugs       "treatments drug use (yes/no)"
label var cigarettes  "number of recent packets"
label var used        "dependent variable relative to arbitrary origin"

save all , replace

clear
cap noexec
```

You can edit a do file anywhere then save as a file with the extension “.do”. In Windows or Mac, you can type `doedit` in Stata to edit any do files.

The ventricular-subventricular zone: a source of oligodendrocytes in the adult brain Oscar Gonzalez-Perez, Jose Manuel Garcia-Verdugo, Adan Aguirre, 2014-09-30 Demyelinating diseases are characterized by an extensive loss of oligodendrocytes and myelin sheaths from axolemma which commonly result in disability in young adults To date there is no effective treatment against these neurological disorders In the adult brain there are neural stem cells NSCs that reside within a niche denominated ventricular subventricular zone V SVZ in the lateral wall of the cerebral ventricles NSCs give rise to neurons and oligodendrocytes that help preserve cellular homeostasis Growing evidence indicates that V SVZ progenitor cells may represent an endogenous source of oligodendrocytes that can be useful to treat demyelinating diseases This e Book *The ventricular subventricular zone as a source of oligodendrocytes in the adult brain* collected the most recent evidence regarding the mechanisms that modulate the proliferation migration quiescence cell fate choices and survival of oligodendrocyte precursors generated in the V SVZ Herein we compiled information about the role of Sonic hedgehog NMDA receptors ErbB proteins hemopressin erythropoietin osmolarity and microglia in the oligodendrocyte production Some chapters also describe the role of oligodendrocyte precursors in the preservation of cellular homeostasis aging and white matter repair All these information is presented as novel research findings short communications and review articles which were written by experts in the field of oligodendrocyte generation myelin production and white matter re myelination

Novel insights in rehabilitation of neglect, 2nd Edition Stefan Van Der Stigchel, Tanja Nijboer, 2015-01-09 Hemispatial neglect is the failure to report respond to or orient to novel or meaningful stimuli presented in the contralesional visual field It constitutes one of the most invalidating neurological disorders that can occur after stroke It is therefore important to treat neglect as adequate as possible and much of the research dedicated to neglect therefore focuses on rehabilitation In this special topic you will find 29 articles on the rehabilitation of neglect This Research Topic has opened new perspectives and has given us an indication of where the field is going Although some of the current rehabilitation techniques have proven to be beneficial there is limited agreement on the most valuable technique or the mechanisms underlying the ameliorating effects
