*Compatibility Modeling* Xuemeng Song, Liqiang

Nie, Yinglong Wang, 2022-06-01 Nowadays fashion has become an essential aspect of people s daily life As each outfit usually

comprises several complementary items such as a top bottom shoes and accessories a proper outfit largely relies on the

harmonious matching of these items Nevertheless not everyone is good at outfit composition especially those who have a

poor fashion aesthetic Fortunately in recent years the number of online fashion oriented communities like IQON and

Chictopia as well as e commerce sites like Amazon and eBay has grown The tremendous amount of real world data regarding

people s various fashion behaviors has opened a door to automatic clothing matching Despite its significant value

compatibility modeling for clothing matching that assesses the compatibility score for a given set of equal or more than two

fashion items e g a blouse and a skirt yields tough challenges a the absence of comprehensive benchmark b comprehensive

compatibility modeling with the multi modal feature variables is largely untapped c how to utilize the domain knowledge to

guide the machine learning d how to enhance the interpretability of the compatibility modeling and e how to model the user

factor in the personalized compatibility modeling These challenges have been largely unexplored to date In this book we shed

light on several state of the art theories on compatibility modeling In particular to facilitate the research we first build three

large scale benchmark datasets from different online fashion websites including IQON and Amazon We then introduce a

general data driven compatibility modeling scheme based on advanced neural networks To make use of the abundant fashion

domain knowledge i e clothing matching rules we next present a novel knowledge guided compatibility modeling framework

Thereafter to enhance the model interpretability we put forward a prototype wise interpretable compatibility modeling approach Following that noticing the subjective aesthetics of users we extend the general compatibility modeling to the personalized version Moreover we further study the real world problem of personalized capsule wardrobe creation aiming to generate a minimum collection of garments that is both compatible and suitable for the user Finally we conclude the book and present future research directions such as the generative compatibility modeling virtual try on with arbitrary poses and clothing generation
