Kale, Anand J.

Kulkarni, 2021-12-26 Mechanical Engineering domain problems are generally complex consisting of different design variables and constraints. These problems may not be solved using gradient based optimization techniques. The stochastic nature inspired optimization techniques have been proposed in this book to efficiently handle the complex problems. The nature inspired algorithms are classified as bio inspired swarm and physics chemical based algorithms. Socio inspired is one of the subdomains of bio inspired algorithms and Cohort Intelligence CI models the social tendencies of learning candidates with an inherent goal to achieve the best possible position. In this book CI is investigated by solving ten discrete variable truss structural problems, eleven mixed variable design engineering problems, seventeen linear and nonlinear constrained test problems, and two real world applications from manufacturing domain. Static Penalty Function SPF is also adopted to handle the linear and nonlinear constraints, and limitations in CI and SPF approaches are examined. *Constraint Handling in Cohort Intelligence Algorithm* is a valuable reference to practitioners working in the industry as well as to students and researchers in the area of optimization methods. **The Design of Highway Bridges of Steel, Timber and Concrete** Milo Smith Ketchum, 1920 *Optimization of Large Structural Systems* G. Topics covered in these volumes include optimality criteria and topology optimization, decomposition methods, and approximation concepts, neural networks, and parallel processing.
