An Introduction to the Study of the Protozoa Edward Alfred Minchin, 1912

Cell Cycle Dynamics and the Physiology of Saxitoxin Biosynthesis in Alexandrium Fundyense (Dinophyceae) Gaspar Taroncher Oldenburg, 1998 Marine dinoflagellates in the genus *Alexandrium* synthesize Saxitoxin STX and several of its derivatives The aim of this thesis was to analyze novel aspects of toxigenesis and the cell cycle in *Alexandrium* and to apply molecular techniques to gain new insights on the regulation of STX biosynthesis Synchronized cultures of *A. fundyense* were studied to determine the dynamics of toxin production throughout the cell cycle STX biosynthesis was shown to be discontinuous and constrained to approximately 10 hours at the beginning of G1 Two cell cycle transition points were identified a light dependent one and a size dependent one Semi continuous cultures of *A. fundyense* were used to determine the effects of temperature and phosphate limitation on the coupling of STX biosynthesis to O₂ Inferred toxin production rates were constant and correlated to G1 over a range of growth rates The effects of phosphate on STX biosynthesis were analyzed and a scheme of interconversions among STX derivatives is proposed Differential Display DD analysis was applied to the identification of up or downregulated genes during toxigenesis in *A. fundyense* The expression patterns of S adenosylhomocysteine hydrolase methionine aminopeptidase and a histone like protein were related to periods
