Digital Signal and Image Processing Using MATLAB Maurice Charbit,2010-01-05 This title provides the most important theoretical aspects of Image and Signal Processing ISP for both deterministic and random signals The theory is supported by exercises and computer simulations relating to real applications More than 200 programs and functions are provided in the MATLAB language with useful comments and guidance to enable numerical experiments to be carried out thus allowing readers to develop a deeper understanding of both the theoretical and practical aspects of this subject   Digital Image Processing Uvais Qidwai,C.H. Chen,2009-10-15 Avoiding heavy mathematics and lengthy programming details Digital Image Processing An Algorithmic Approach with MATLAB presents an easy methodology for learning the fundamentals of image processing The book applies the algorithms using MATLAB without bogging down students with syntactical and debugging issues One chapter can typically be completed per week with each chapter divided into three sections The first section presents theoretical topics in a very simple and basic style with generic language and mathematics The second section explains the theoretical concepts using flowcharts to streamline the concepts and to form a foundation for students to code in any programming language The final section supplies MATLAB codes for reproducing the figures presented in the chapter Programming based exercises at the end of each chapter facilitate the learning of underlying concepts through practice This textbook equips undergraduate students in computer engineering and science with an essential understanding of digital image processing It will also help them comprehend more advanced topics and sophisticated mathematical material in later courses A color insert is included in the text while various instructor resources are available on the author s website

Image Processing PROF. Pooja SAXENA,PROF. Vishnu SAXENA,2017-04 Digital signal processing is the subject of engineering in which we process the digital signal with the help of computer perform some mathematical operation upon signal and extract desired information from the signal Digital Image processing is the branch of digital signal processing in which first we convert an image into the digital signal with the help of a digital camera and computer then store this image into a computer Once image is stored into the computer then it is converted into the two dimensional matrix of numbers Now we can perform any mathematical operation with these numbers and can modify or transform these numbers in to the desired way and can extract an information This process of modifying or extracting the desired information from digital image is called digital image processing
