■ **Aims and purpose**

This unit aims to enable learners to specify, plan and implement an engineering project and present its outcome.

■ **Unit introduction**

In the modern world engineers and technologists often involved fully or in part with identifying problems and finding suitable solutions. These engineering problems can range from a very large project, such as designing and building a power station, to a small project, such as designing and producing a paper clip or a lamp. No matter how large or small these problems need to be, a project manager is often needed to engineer solutions. This unit will provide learners with appropriate to present their own solutions to engineering projects and provide them with the confidence to bring out a project work within their chosen engineering discipline at the technical level.

This unit aims to integrate the knowledge and skills learners have gained throughout their programme of study into a major piece of work that reflects the type of performance expected of an engineering technician. The project is intended to develop the learner's ability to control and plan a course of action and follow this through to produce a work solution/outcome to an agreed specification and timescale.

The outcome of the project could be an engineering product, service, system, or process or modification to an existing product or process. As with all work, the outcome of the project will be presented and fully evaluated, although the project is also about developing the personal skills necessary to carry out the project. Throughout the project learners will need to apply the technical skills developed in the other units in the qualification.

■ **Learning outcomes**

On completion of this unit a learner should:

1. Be able to specify a project, agree a product and establish a solution
2. Be able to plan and monitor a project
3. Be able to implement the project using agreed procedures
4. Be able to present the project outcome.
