Simulating Neural Networks with Mathematica James A. Freeman, 1994 An introduction to neural networks their operation and their application in the context of Mathematica a mathematical programming language Feature show how to simulate neural network operations using Mathematica and illustrates the techniques for employing Mathematics to assess neural network behaviour and performance

*Building Neural Networks* David M. Skapura, 1996 Organized by application areas rather than by specific network architectures or learning algorithms Building Neural Networks shows why certain networks are more suitable than others for solving specific kinds of problems Skapura also reviews principles of neural information processing and furnishes an operations summary of the most popular neural network processing models

Rauch, 1998 Paperback The Symposium on Artificial Intelligence in Real Time Control 97 AIRC 97 was the seventh in the series of symposia and workshops under the sponsorship of the International Federation of Automatic Control s IFAC Coordinating Committee in Computer Control and of the Technical Committee on Artificial Intelligence in Real Time Control Artificial Intelligence methods including expert systems artificial neural networks fuzzy systems and genetic algorithms are penetrating almost every field of engineering These methods have shown their possible application in control monitoring and supervising tasks which are difficult or impossible to solve when using conventional techniques We have now come to a stage where there is a need to discuss and present these methods in a broader framework not only showing their concepts and available algorithms but also their relative benefits advantages and disadvantages This was the purpose of th *Neural Information Processing and VLSI* Bing J. Sheu, Joongho Choi, 1995-02-28 *Neural Information Processing and VLSI* provides a unified treatment of this important subject for use in classrooms industry and research laboratories in order to develop advanced artificial and biologically inspired neural networks using compact analog and digital VLSI parallel processing techniques *Neural Information Processing and VLSI* systematically presents various neural network paradigms computing architectures and the

associated electronic optical implementations using efficient VLSI design methodologies Conventional digital machines cannot perform computationally intensive tasks with satisfactory performance in such areas as intelligent perception including visual and auditory signal processing recognition understanding and logical reasoning where the human being and even a small living animal can do a superb job Recent research advances in artificial and biological neural networks have established an important foundation for high performance information processing with more efficient use of computing resources The secret lies in the design optimization at various levels of computing and communication of intelligent machines Each neural network system consists of massively paralleled and distributed signal processors with every processor performing very simple operations thus consuming little power Large computational capabilities of these systems in the range of some hundred giga to several tera operations per second are derived from collectively parallel processing and efficient data routing through well structured interconnection networks Deep submicron very large scale integration VLSI technologies can integrate tens of millions of transistors in a single silicon chip for complex signal processing and information manipulation The book is suitable for those interested in efficient neurocomputing as well as those curious about neural network system applications It has been especially prepared for use as a text for advanced undergraduate and first year graduate students and is an excellent reference book for researchers and scientists working in the fields covered
