Human Computer Interaction – Tutorial Week 5 on Interface and Interaction Design Guidelines

In this week's tutorial will be focusing on interaction design guidelines for mobile applications both from a commercial and research perspective.

Exercise 1

Read the following article that explains 6 main design guidelines while designing mobile applications:
https://www.codementor.io/design/tutorial/mobile-app-ui-design-principles
(the section on the 3 technical guidelines may also be relevant). From the 6 basic guidelines, choose 3 that are the most relevant for your chosen project idea and discuss why.

1. Anticipate and Answer Users' Queries: the concept idea stores summary of trips. It displays messages like "distance covered, score, points and redeemed points."

2. In-App Search: the user can search for the trips done in past one week. The user just need to enter the date they took the trip and all the information about the trip will come up e.g. current location and destination, distance in km, scores and points earned, any distraction and speeding.

3. Single Trail Learning Experience: the app is very simple to learn in fact the user can switch between menus just by swiping left. The user can also select theme specific to their choice and the theme automatically changes in day and night. In addition, the app also has user guide in form of vides that better helps users navigate through the app.

Exercise 2

Quickly skim through the article uploaded on vUWS (Mobile App Guidelines), particularly focusing on Table 1 on page 5 of the article. A list of 39 guidelines are presented in this Table.

Exercise 2A)

In extension of Exercise 1), choose 5 guidelines that are the most relevant to your proposed project idea and present initial ideas on how you intend to frame your design accordingly based on the guideline.
