Invertebrate Embryology and Reproduction Fatma El-Bawab, 2020-01-18 Invertebrate Embryology and Reproduction deals with the practical and theoretical objectives of the descriptive embryology of invertebrates along with discussions on reproduction in these groups of animals. It explains several morphological and anatomical expressions in the field and covers the embryology of invertebrate animals starting from the Protozoa to the Echinodermata, the Protochordate, and Tunicates. These groups include economically important aquatic invertebrates such as crustaceans, as well as medically important invertebrates and economic arthropods. Each chapter is preceded by the taxonomy of the discussed phylum and/or the species to enable the reader to locate the systematic position. Covers phylum definition, general characteristics, classification, reproduction (agametic, gametic), reproduction, spawning, fertilization, development, and embryogenesis. Includes recent findings in the area along with detailed figures and photos that illustrate important concepts. Brings together difficult-to-obtain research data from the field, not only in Egyptian libraries but globally and previously only found through specialized references, not widely available. Clarifies descriptions with striking photos and electron microscopical studies of different species.
