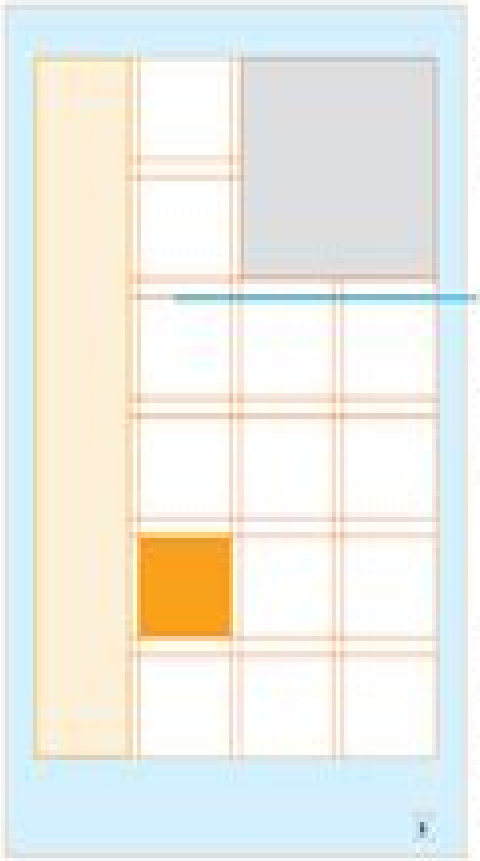
1. Know the Components

The main components of a grid are margins, columns, markers, flowlines, spatial zones, and modules. Starting a new project can be hard. Begin with your content, then roll up your margins and columns. You'll need to make adjustments. Just start.

COLUMNS are vertical containers that hold type or images. The width and number of columns on a page or across multiple pages will vary depending on the content.

MODULES are individual divisions separated by consistent spaces, providing a repeating, uniform grid. Combining modules can create columns and rows of varying sizes.

MARGINS are buffer zones. They represent the amount of space between the trim area (including gutter) and the page content. Margins can also house secondary information, such as notes and captions.



SPATIAL ZONES are groups of modules or columns that can have specific areas for type, info, images, or other information.

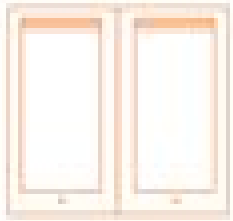
FLOWLINES are alignments that divide space into horizontal bands. Not actual lines, flowlines are a method for using space and elements to guide a reader across a page.

MARKERS help a reader navigate a document, indicating placement for material that appears in the same location, markers include page numbers, running heads and feet, headers and footers, and icons.

2. Learn the Basic Structures

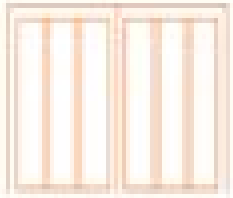
Although the diagrams below show common structures, there are additional variations on the basic configurations. For multi-column grids of newspapers and books, often editorial layouts have columns to flow or more.

A SINGLE-COLUMN GRID is generally used for continuous running text, such as essays, reports, or books. The block of text is the main feature on the page, opening or device screen.

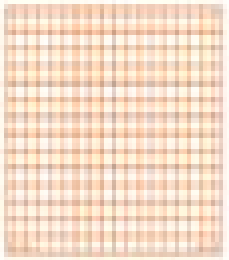


A TWO-COLUMN GRID can be used to combine a set of text or to provide different sizes of information or separate columns. A double-column grid can be arranged with columns of equal or unequal width. In most projects, one column is wider than the other. The wider column is double the width of the narrow column.

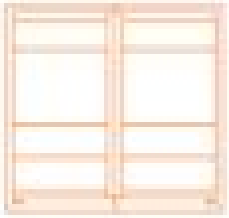
MULTI-COLUMN GRIDS offer greater flexibility than single- or two-column grids, combine multiple columns of varying widths, and are useful for magazines and websites.



MODULAR GRIDS are best for controlling the kind of complex information seen in newspapers, calendars, charts, and tables. They combine vertical and horizontal columns, which arrange the structure into smaller clusters of space.



HIERARCHICAL GRIDS break the page into zones. Many hierarchical grids are composed of horizontal columns. Some magazines organize multiple pages horizontally. For ease and efficiency, many designers divide material into horizontal bands.



START BY ASKING

- What is the material? Is it complicated?
- How much of it is there?
- What is the goal?
- Who is the reader/consumer?
